PROGRAMMERS

WE ARE LOOKING FOR TOP QUALITY PROGRAMMES TO MARKET IN THE UK AND ABROAD. THE PROGRAMMES MUST BE OF TOP QUALITY AND IN MACHINE CODE WITH GOOD GRAPHICS AND SOUNDS AND ORIGINAL CONCEPT. WE ARE LOOKING FOR PROGRAMMERS TO CARRY OUT WORK ON NEW MACHINES SUCH AS THE C.B.M/16 AMSTRAD AND M.S.X. WE CAN SUPPLY THESE MACHINES TO CARRY OUT WORK FOR MIRAGE. WE ARE ALSO OFFERING £500 PRIZE FOR THE BEST PROGRAMME RECEIVED BY THE END OF FEBRUARY 1985 WHICH WE WILL DECIDE TO MARKET. WE OFFER AN OUT RIGHT PAYMENT OR 10% PLUS PAYMENT OR 20% ROYALTIES. FOR MORE INFORMATION CONTACT THE SOFTWARE MANAGER HE WILL BE GLAD TO LISTEN TO ANY QUESTIONS YOU MAY HAVE.

SOFTWARE HOUSES

WE ARE LOOKING FOR TOP SELLING PROGRAMMES TO DISTRIBUTE TO OUR WIDE RANGE OF OUTLETS THROUGHOUT THE UK AND GIVE YOU A VERY FAST SERVICE TO HELP WITH YOUR SALES AND TO MAKE THE MOST OF YOUR PRODUCTS. SEND A SAMPLE COPY OF YOUR PRODUCTS WITH RATES AND TERMS FOR A FAST ASSESSMENT. FOR MORE INFORMATION CONTACT THE SALES MANAGER HE WILL BE GLAD TO HELP AND ASSIST YOU.

DEALERS AND DISTRIBUTERS

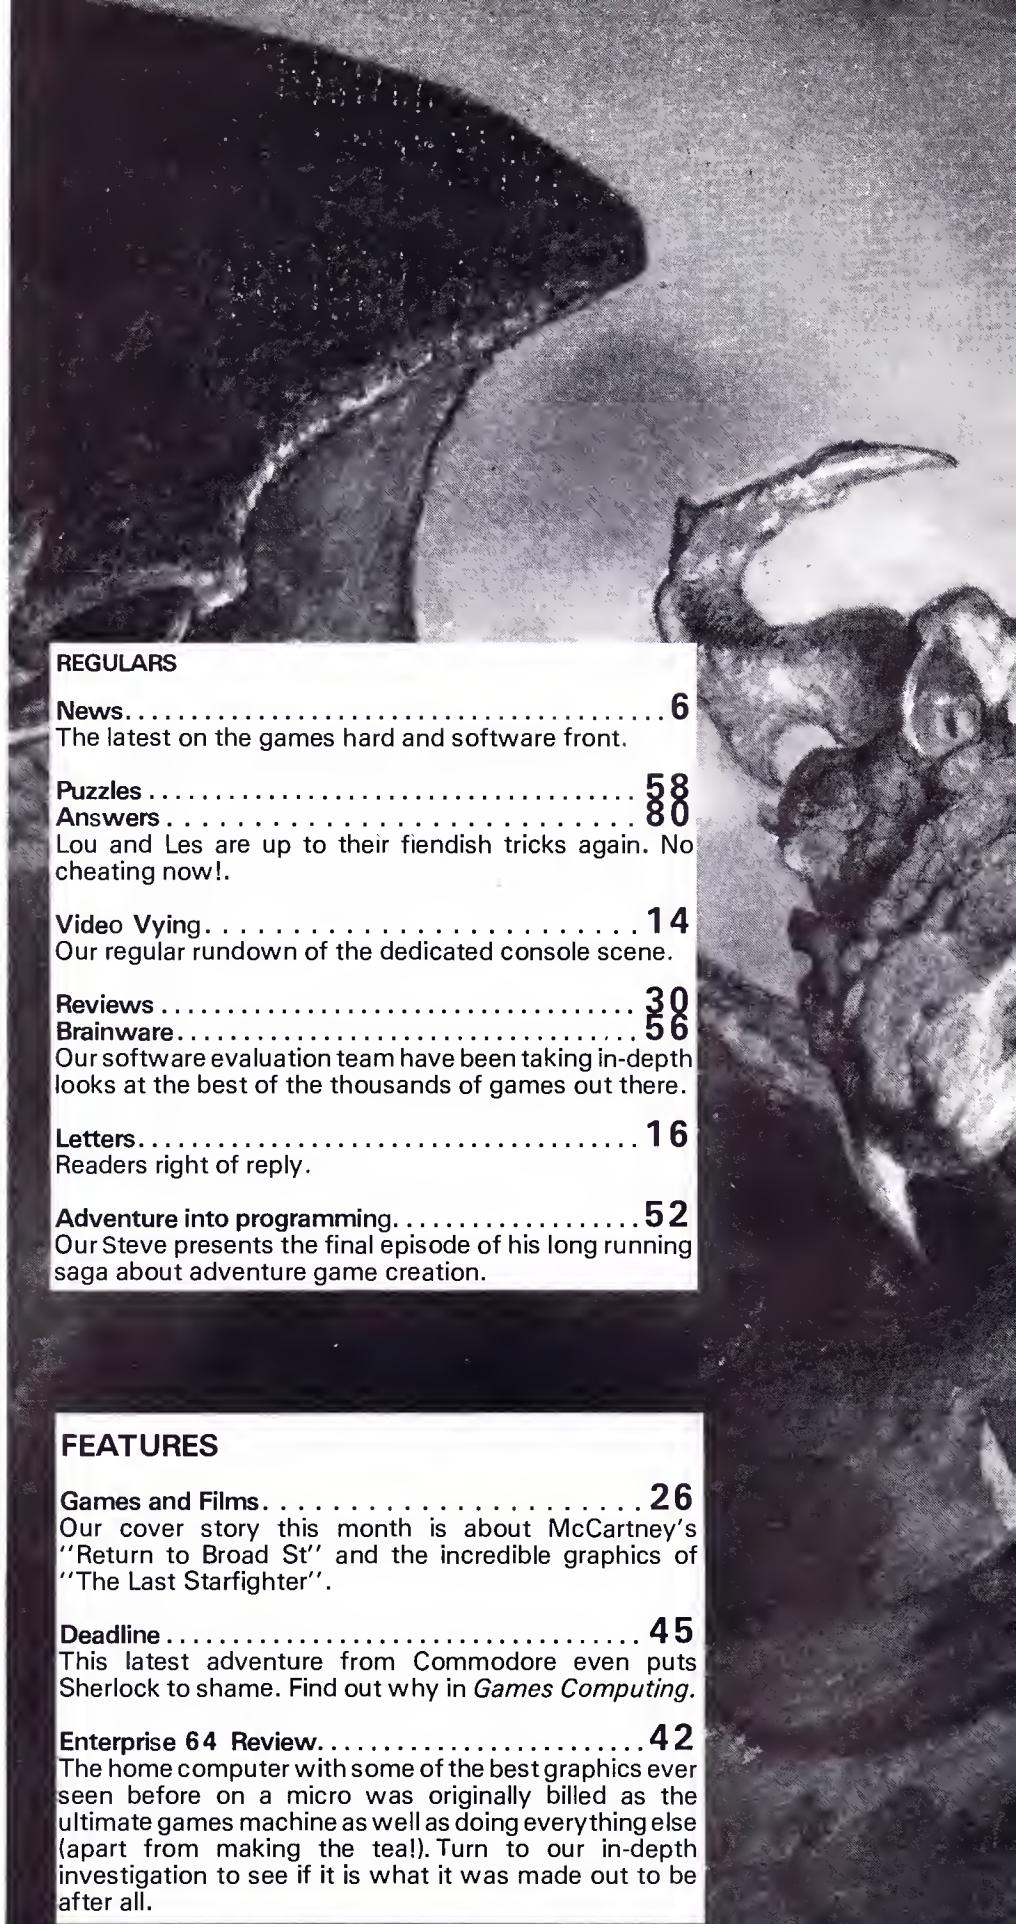

DEALERS WE HAVE THE BEST SELLERS FROM THE BEST PRODUCERS; WE ALSO OFFER VERY GOOD RATES AND TERMS TO HELP YOU AND US TO ACHIEVE THE BEST SALES AND SERVICE. FOR MORE INFORMATION CONTACT THE SALES MANAGER.

DISTRIBUTERS HAVE YOU GOT THE MIRAGE RANGE ON YOUR SHELVES, IF NOT THEN CONTACT THE SALES OFFICE FOR SAMPLES AND RATES.

MARCH 1985

GAMES COMPUTING

PROGRAMS

Boxing **Spectrum/18**

You can challenge a variety of world famous opponents in this highly graphical game.

Rollergoal **Extended TI-99/4A/68**

An excellent game for the extended TI that closely follows the film Rollerball. Guide your skater around the track avoiding the bikers and opposing skaters, and try to get that goal!

Colour Coder **C64/76**

Guess the combination of colours that the computer sets you. An excellent presentation of the classic game.

Treasure Castle **C64/10**

A fiendishly difficult adventure game for the 64. Can you get into the castle alive?

Blackjack **Atari/46**

Card game and gambling for the Atari.

Girders **VIC/72**

Terrorists have bombed a building site, it's up to you to defuse it.

The Buried Citadel **VIC+16K/60**

Adventure intrigue for the expanded VIC 20.

Dodgems **BBC/Electron/38**

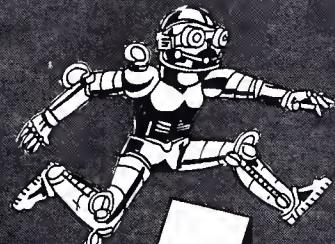

Race around the track and avoid colliding with the opposing computer controlled car.

Tramiel Talks

Jack Tramiel, the new boss of Atari, came to London recently and spelt out his plans for a "new look" Atari in 1985. His plans include:

The scrapping of the 7800 Pro system, the super games machine that would run all standard VCS/2600 cartridges and some new super carts. The 2600Jr and Jt though will have continued support.

A new redesigned 800XL, this would be little more than a cosmetic change, as the machine will be similar to its present form. The 600XL has been already scrapped.

A new range of eight bit machines, all compatible with existing 400/800/XL software with a lap help portable with 256K, a 128K machine similar to the 800XL, and a music machine.

Within the next month or two the second generation of Atari machines should be launched, they are based on the 16 bit Motorola 68000 processor as used in top business machines; an eight bit version of this chip is used in the QL. The machines will have 255K to 4M memory and cost below £400. These machines are reputed to have really stunning graphics that are better than anything yet available. A new range of peripherals is to be launched with a low priced printer at £59.

In the middle of this year the really big machines will come out. Based on the 32 bit National Semiconductor 32032 processor, these will really be business machines, but they will have a higher spec than any others on the market and be priced at less than £1000. This is part of a drive to change the image of Atari from a games company to a more serious computer manufacturer.

The first effects of this 'new deal' are the re-structuring of prices, with the 800XL down to an excellent value £129.

Atari are at Atari House, Railway Terrace, Slough, Berkshire SL2 5BZ.

Can We Throw Away Microdrives At Last?

Thurnall Electronics, a little known Manchester firm, have just completed a three inch disk system for the ZX Spectrum. The system uses the standard Hitachi drives. The system comes in a small box about twice the size of the drive itself and connects to the Spectrum by way of the now familiar 50 way ribbon cable. The system is compatible with Microdrives, Interface 1 and 2 and most other known printer and joystick interfaces — though none of these are necessary for operation.

One interesting feature is that it uses up no Spectrum memory at all and will work on both 16K and 48K versions of the machine. The unit is a total redesign of an original system using the Hungarian MCD-1 disks which Thurnall sold last year.

The new system features an extra 10K of storage with disks that are

reversible to give 160K of storage per side. Also included is an output only RS232 interface for serial printers.

The big advantage is speed. Tape users have to wait long periods for programs to load. Microdrives are a little better only the tapes themselves cost a great deal and don't last too long before they get munched up destroying your data with them.

All changes with Thurnall disks though. Typical loading times are a minimum of one second, with a maximum loading time for a 40K program of 2-3 seconds. How's that for fast!

The operating system takes the form of an extended Basic in ROM that uses Spectrum Basic commands to communicate with the disk drive, without any funny command structures or 'user hostile' features.

Thurnall disk drives for the ZX Spectrum will cost around £220-£230 and are available now.

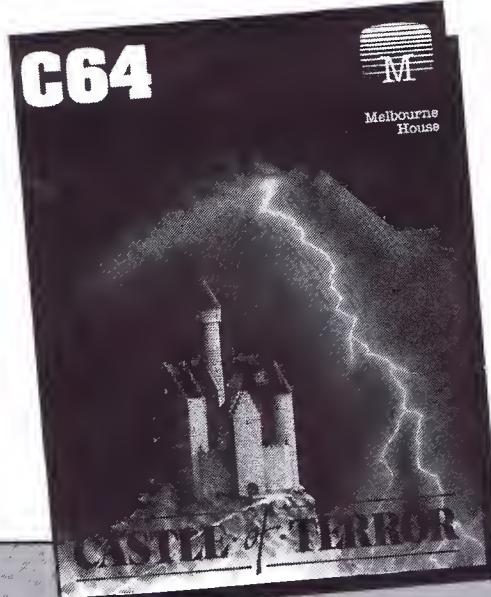

Thurnall Electronics are at 96 Liverpool Rd, Cadishead, Manchester M30 5BL.

Terrifying Melbourne House

Castle of Terror is a new version of the original Dracula story set on a Commodore 64.

The adventure features full graphics that are drawn at high speed and use the C64's graphics to the full. Text handling has not been sacrificed at the expense of graphics either. The Commodore's 'elephantine' memory will take the 40 pictures as well as full lexicon checking for full sentence input — no more of the verb-noun command structure.

It's All Greek to Me!

Ocean's latest game, called *Gift from the Gods*, is set in the Palace of Mycenae in Ancient Greece.

The (on-screen) player is controlled by a system that Ocean call "Intelligent Control". This method of control is where the (real) player can move his joystick and his alter ego will move in that general direction according to the environment and what circumstances permit.

The plot follows the trials and tribulations of Orestes who, under the direction of the gods Zeus and Apollo, must avenge the murder of his father, king Agamemnon.

Agamemnon was murdered by Orestes' mother — Queen Clytaemnestra and her lover Aegisthus (try saying those with your mouth full!). Orestes was banished and his sister, Electra (not the Acorn version) was imprisoned beneath the palace in the catacombs.

Are you following the story so far? Good, I'll carry on then. Needless to say, after a few years of Clytaemnestra and Aegisthus' reign, the kingdom falls into a bit of a decline. But all is not lost, read on . . .

On his 21st birthday, Orestes emerged from his hiding place and was taken by the gods to Mount Panassus, here he got the usual accoutrements of a silver studded sword and the seven tears of Icarus.

As usual there's a catch. Orestes must return to the kingdom of Mycenae and prove that he is Agamemnon's son and the rightful heir to the throne. This can only be achieved by entering the catacombs beneath the castle and solving Agamemnon's puzzle.

The player becomes Orestes and must enter the catacombs to collect various Euclidian shapes that fit together to reveal the exit to the catacombs.

Various nasties are out to get you, however, some of the nasties are actually illusions and will do you no harm at all! Orestes' sister, Electra, knows all about the shapes, so if you find her it makes life a lot easier. There are many other plots and sub-plots in this game — and most of them are unpronounceable!

Gift from the Gods costs £9.95 and is available for the ZX Spectrum.

Ocean are at 6 Central St, Manchester M2 5NS.

Castle of Terror is set in the 1880s, the player starts in a village near to where the sinister Count lives. By talking to the villagers you can discover the plot — namely that the nasty vamp has removed a beautiful young maiden and taken her up to his evil castle.

If you haven't already guessed, your job is to enter the castle, save the girl, and remove the Count's treasure, which rumour has it is there. Melbourne House say that surviving is success in itself, but escaping with the treasure is the ultimate achievement.

Castle of Terror is for the Commodore 64 and costs £9.95 on tape.

Melbourne House are at Castle Yard House, Castle Yard, Richmond, Surrey TW10 6TF.

Llovely Llaser Light from Llama

Jeff Minter, the inscrutable four legged friend lover of Llamasoft has just launched a new product that promises to add a new dimension to light shows and other visual effects.

Called *Psychadelia*, the program cannot be labelled in the way that adventure, strategy, arcade, and all the various crossbreeds are. Being very difficult to describe it can best be thought of as something you perform on rather than play.

The ideal setting is in a dark room or party/disco where there is music playing. The user, or rather performer, can then play the computer to produce a fantastic light show that would pale into insignificance even the most sophisticated computer graphics that can be seen on Top of the Pops.

The performer can select various preset shapes to go on the screen, or design your own, and literally hundreds of options for speed and colour balance. When using the stick you can create whirls and fast moving patterns all over the screen. Almost all the parameters can be changed, leaving the performer to make all the creative input.

Fantastic effects can be achieved, as was shown by Jeff himself at the launch in a London pub. For 10 minutes the enthralled crowd watched the light show being performed to a compilation tape of currently popular music (which Mr Minter admitted he didn't really like, but the pressures of popular demand forced him. He much prefers Pink Floyd, Genesis, and Marillion). After the show the assembled members of the computer press gave the performer a much deserved round of applause — despite Jeff modestly claiming that he was no good at it!

Psychadelia is available now for the Commodore 64, VIC, and Commodore 16. Versions are possible for the Spectrum or Amstrad, but it is unknown whether they will be as good.

Llamasoft are at 37 Mount Pleasant, Tadley, Herts.

Record Breaking Ariolasoft

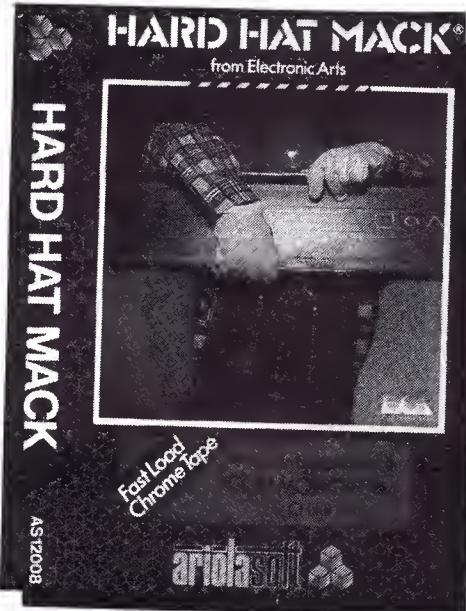

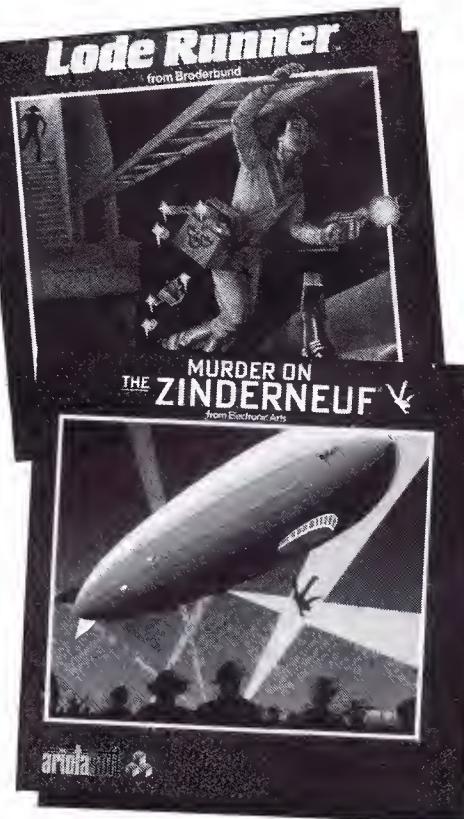

Ariolasoft is a new software company emerging from the giant Ariola/Arista record label.

Arista are best known recently for producing the single and album 'Ghostbusters', from the film so much in the computer press recently. The company is following the common trend of selling old American programs in Britain at British prices. The American market being such that the hardware is up to half the price there but the software up to 10 times the price it is here (I think that we get the best deal out of that!). Ariolasoft will be selling the best American software of the past couple of years at around the £10 mark, with a luxury range at a bit higher. The American versions usually retail for around \$35. This is why it is only now that the Americans are beginning to make an impact.

The first releases are for the Commodore 64 on tape or disk and include:

Choplifter, the original helicopter game where you must rescue the hostages, shoot down enemy planes and missiles, and avoid the tanks. You must search out the little men that run around the bottom of a scrolling Defender-like screen and return them across the border to the American Post Office that just happens to be there.

Lode Runner, this ladders-and-ramps game followed closely on the heels of the first game that spawned a genre, including the famous Manic Miner. The odd thing about this game was that it made the transition from the home into the Arcade as a nickle-in-slot machine, rather than the usual route of the other way around!

One-On-One may have limited appeal in the UK but it's great fun all the same. The game is based on basketball and has two superbly animated figures.

David's Midnight Magic is the odd name for a pinball simulation. Complete with tilt and all the features that pin heads have come to expect.

Raid on Bungling Bay is one of the sequels to Choplifter but is a totally different game concept, similar in some ways to Time Pilot '84 with the pilot flying his helicopter over a fully detailed terrain with enemy outposts and nasties trying to stop you all the way.

Also being released is **Spelunker**, **Hard Hat Mack**, and **The Realm of Impossibility**. A de-luxe range is also being released, consisting of: **Operation Whirlwind**, **Murder on the Zinderneuf**, **Archon**, and the unlikely sounding **M.U.L.E.**

All games are available for the Commodore 64, other versions may be released later on in the year. Prices for the standard range are £9.95 for tape and £12.95 for disk. The de-luxe range with bigger packaging, instruction and rule books, and more complex games cost £11.95 on tape and £14.95 on disk.

MONOPOLY

Monopoly and Cleudo to follow Scrabble

Leisure Genius, the company who marketed a version of Scrabble for the Apple and then, with Psion, converted it to run on the ZX Spectrum, have produced two new games based on the popular Monopoly and Cleudo games.

The original Scrabble was written as part of a thesis on word groupings by a student studying for a PhD.

Scrabble for the Spectrum went on to be one of the biggest selling Spectrum games. Leisure Genius is hoping for similar success with the Commodore 64 this year. The version of Monopoly is 'official' and is the reason that Waddingtons took some legal action around a year ago against some companies who were selling unlicensed copies. The official version promises to be a faithful reproduction with 'carefully designed apt theme tunes' say LG.

If you are into murder investigation then their version of Cleudo could be the answer. Again all the trappings of the 'real' thing are there and again what LG consider an 'apt' theme tune will warble along in the background.

Cleudo and Monopoly for the Commodore 64 with Spectrum and Amstrad to follow later in the year costs £12.95 on tape.

New - the official Spectrum Upgrade!

Turn your Spectrum into a Spectrum+ for just £20

Here's some exciting news for 48K Spectrum owners ... the official Spectrum Upgrade Kit.

The £20 Kit has everything you need to turn your Spectrum into the stylish new Spectrum+. You don't even need an understanding of electronics, just the ability to solder a few wires together! The leaflet in the kit gives clear, step by step instructions.

If you're not sure about doing it yourself, don't worry. Simply return your 48K Spectrum to Sinclair and for £30 we'll upgrade it for you.

Whichever you decide on, you'll also receive the new 80-page User Guide and Companion Cassette.

The bigger, better Spectrum keyboard

The Spectrum+ measures 12½" x 6". It has a large typewriter-style keyboard, with hard, moulded keys.

You'll find the new keyboard has a smooth, positive action - ideal for touch-typing, word processing, simulation programs, and extended programming sessions. Two retractable legs give a perfect typing position.

There are 58 keys in all, including 17 new keys. Programmers will be pleased to see dedicated punctuation keys, a space bar, and separate shift keys for graphics and extended modes. And a reset button allows you to clear a program from your computer's memory without disconnecting the power supply.

The official Spectrum Upgrade

Naturally your upgraded computer will accept all the peripherals in your Sinclair System-Interface 1, Microdrives and so on - as well as all

Spectrum software.

Just as important, new Spectrum software and peripherals will be designed with the Spectrum+ in mind. So the Sinclair upgrade adds stylish looks, new capabilities ... and new potential for the future.

Included - the new Spectrum+ User Guide and Companion Cassette

The new User Guide has over 80 pages of information, including a handy BASIC dictionary. The Companion Cassette provides an interactive tour of the new keyboard, and includes three entertaining arcade games.

TO ORDER BY MAIL:

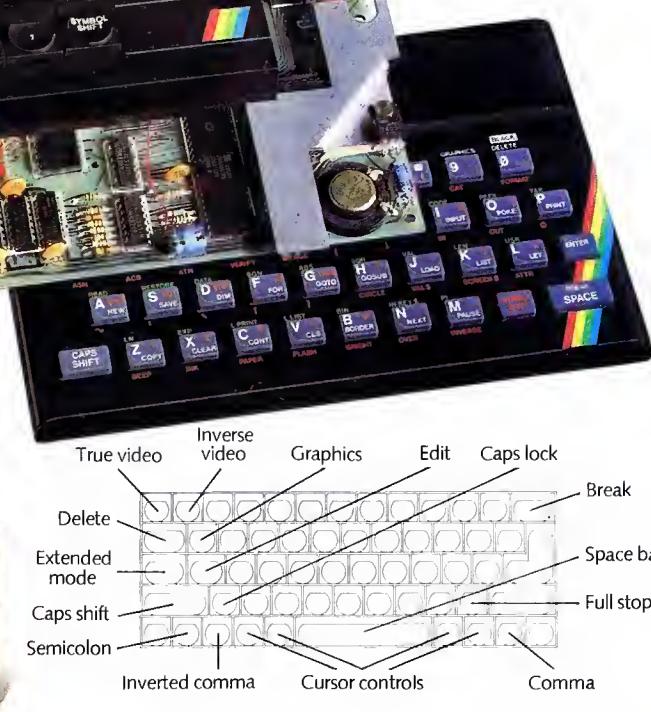

When ordering the Upgrade Service, send off your 48K Spectrum to the address below, carefully wrapped, together with the completed coupon and appropriate payment. (Please do not return the mains adaptor, manual or other ancillaries.) Your upgraded computer will be despatched to you within 10 days of receiving your order.

When ordering the Upgrade Kit, simply complete the coupon, enclosing the appropriate payment and post it to us at the address below. Please allow up to 28 days for delivery.

BY PHONE: Access or Barclaycard holders can call Camberley (0276) 685311 for personal attention, 9am to 5pm Monday to Friday. Only the Upgrade Kits can be ordered by phone.

Please note: the upgrade offer applies to working 48K Spectrum models in the UK only.

- Professional full-size keyboard - includes 17 extra keys.
- Responsive typewriter-style action.
- Accepts all current Spectrum software and peripherals.
- Complete with 80-page User Guide and Companion Cassette.

To: Sinclair Research Limited, Upgrade Dept, Stanhope Road, Camberley, Surrey, GU15 3PS.

All prices include VAT, post and packing, User Guide and Companion Cassette.

Please send me the Spectrum+ Upgrade Kit. I enclose payment of £20.
OR
 Please upgrade my 48K Spectrum for me. I enclose my computer together with payment of £30.

I enclose a cheque/postal order payable to Sinclair Research Limited for £_____

OR

Please charge my Access/Barclaycard no. _____

RUNS ON
CBM 64

Treasure Castle

The object of this adventure is to get in to the castle, remove the jewel and crown and get out again.

You cannot get out the same way that you got in. You start outside the castle and have to cross a moat but be careful or you may drown.

Inside the castle there is a black knight and he can appear anywhere. If you are carrying something he will take it from you. If you are not carrying anything then he puts you in the dungeon. Scattered around the rooms are various objects which you can pick up, carry or put down. Some of the objects you pick up will enable you to kill the black knight.

One of the rooms is a dark room where you will not be able to find the exits without a lamp.

At any time you can find out what you are carrying by typing "INVENTORY".

The listing is plentifully supplied with REMS so that you can see exactly what each section does.

You can also get full instructions at the start including the commands the computer will obey.

VIDEO VYING

By Sue Bartlett

GYRUSS

Runs on: Atari VCS
Made by: Parker/Silica Shop
Price: £12.00

The concept of this game is to battle your way across the Universe from the far away Neptune to the safe haven of earth.

You have to fend off waves of spiraling, swirling alien ships by piloting your spacecraft in a circular flight pattern, blasting the intruders with your rapid-fire lasers before they blast you.

Killer meteors and deadly satellites are also after you. Once you reach one planet, you have a few seconds to rest before you take off to destroy the next wave of attackers.

Although the concept of Gyruss is very basic, it does have some good 3D effects. But, the best feature of the game is its music. Throughout the game Toccatta and Fuge by Bach can be heard, and it is the best music I have heard on a video game.

This music makes the game much more dramatic and exciting than it actually is — it is almost worth buying the cartridge just to listen to the music!

STRATEGY X

Runs on: Atari VCS
Made by: Gakken/Silica Shop
Price: £6.95

Your mission, as usual in a war game, is to attack and destroy the enemy. You move forward in your little red tank by destroying the blocks in your path. If your tank moves onto a green zone it will start to slip and use more fuel.

It is a good idea to move round to the side or behind the enemy gun position so that it can not shoot at you and it is easier to destroy.

An alarm will sound when you are running out of fuel, but if you manage to re-fill you can get through enemy lines and pass under the triumphal arch — and get onto the next screen.

In order to re-fuel your tank you must move on top of the fuel tank — the fuel gauge will then indicate full.

In scene two enemy aircraft make a surprise attack. You must shoot them down whilst avoiding missiles from planes zig-zagging above you. This time if you move onto the orange zone, you slip and lose petrol.

You add to your score by moving forward, destroying blocks and gun posi-

tions and shooting down aircraft. You lose one of your three tanks by colliding with a block, by being hit by a shell or missile, or by running out of fuel.

Strategy X is not one of the best battlefield games around. It has unrealistic graphics, although I like the way the tank moves along, but at the price who can complain!

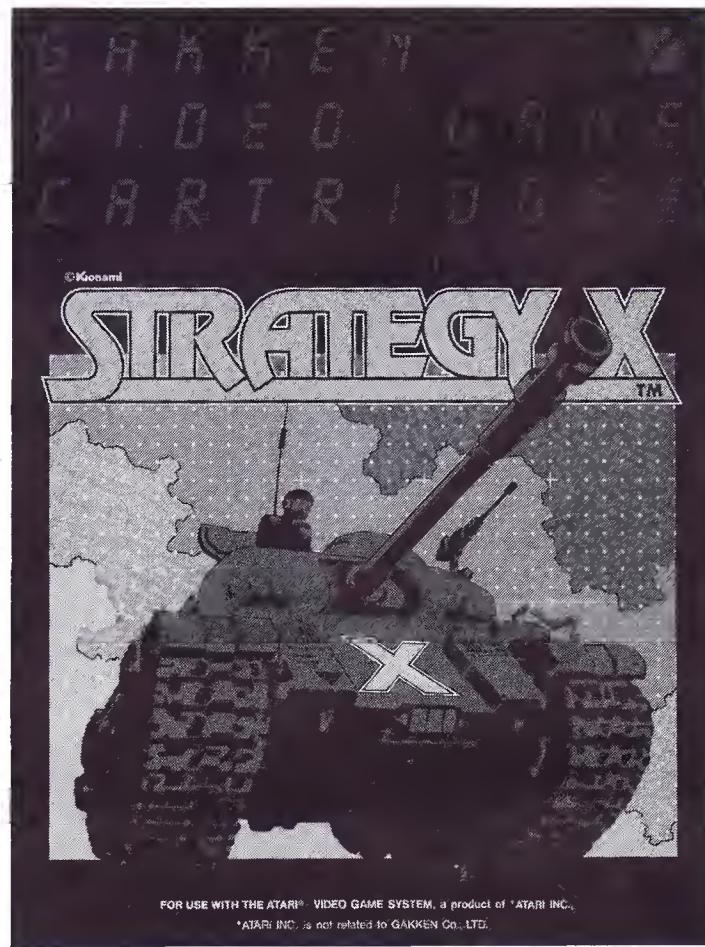

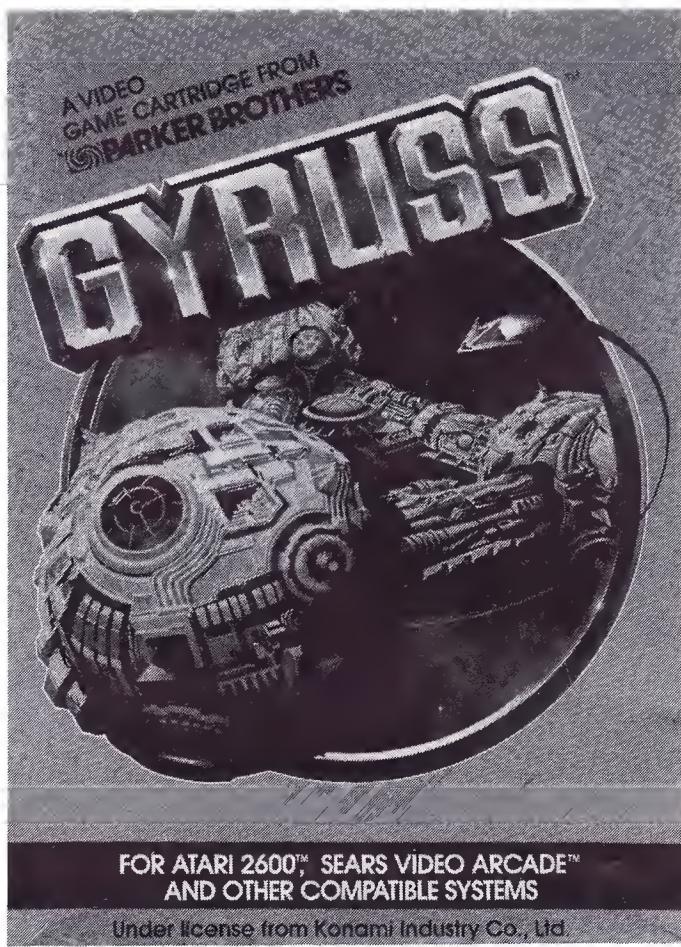

MARINE WARS

Runs on: Atari VCS
Made by: Gakken/Silica Shop
Price: £6.95

Marine wars consists of four scenes — a fight between battleships by day and by night and a battle between fighters and battleships by day and by night.

At night you can not see the top row of enemy ships, but when a shell hits a ship and explodes the screen will light up for four seconds and the ships will appear. The enemy starts out with nine battleships and 30 fighter aircraft. You begin with three battleships.

The joystick is used to move your battleship to the left and right, and to fire shells at enemy ships and planes. If you fire a shell when your ship is moving, the shell will go in the opposite

VIDEO VYING

direction to where the ship is heading.

Points are awarded when you hit any battleship, an enemy fighter, an enemy torpedo, an enemy bomb and an enemy MTB.

Although this game is fairly simple, it does have some effective graphics and is also very colourful.

POOYAN

Runs on: Atari VCS

Made by: Gakken/Silica Shop

Price: £9.95

In this game you are Mama Pig protecting her little piglets — Pooyans — from a fierce pack of wolves.

The first task Mama has to cope with to save her Pooyans is that of bursting the wolves' balloons with arrows as they come floating down into the valley. She can also make the wolves fall by throwing the bait that appears at the top of the valley. When the wolves try to grab the bait, they let go of their balloons and so fall down into the valley.

If the wolves float down to the bottom of the valley, they will climb some steps and attack Mother Pig from

behind. The wolves defend themselves with shields and attack by throwing stones.

In the second scene wolves float up from the bottom of Wolf Valley with their balloons and Mama tries to stop them using arrows and bait. When six wolves reach the top, they can start dropping large rocks on Mother Pig! To prevent them doing this you must destroy 'boss wolf'.

Points are awarded if Mother Pig hits a balloon, wolf or stone with an arrow or the bait.

Although it is fairly difficult to make out the shape of the pigs, the wolves are graphically very good and I like the way they push the rocks in Round 2.

STAR WARS

Runs on: Atari VCS

Made by: Parker/Silica Shop

Price: £12.00

Yours mission in this game is to destroy a swarm of Imperial Tie Fighters, a barrage of fireballs and a maze of laser towers before finally blasting the Death Star from existence.

In Round one you will meet the Im-

perial fleet made up of Tie fighters armed with deadly fireballs. You will occasionally see Darth Vader's ship — if you blast it with proton torpedoes you gain extra points.

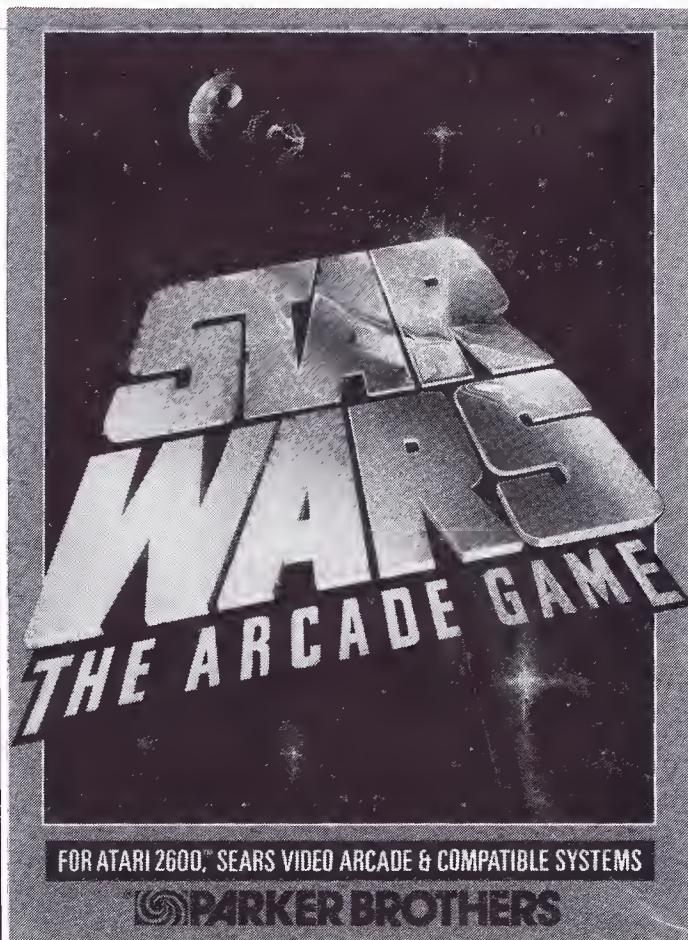

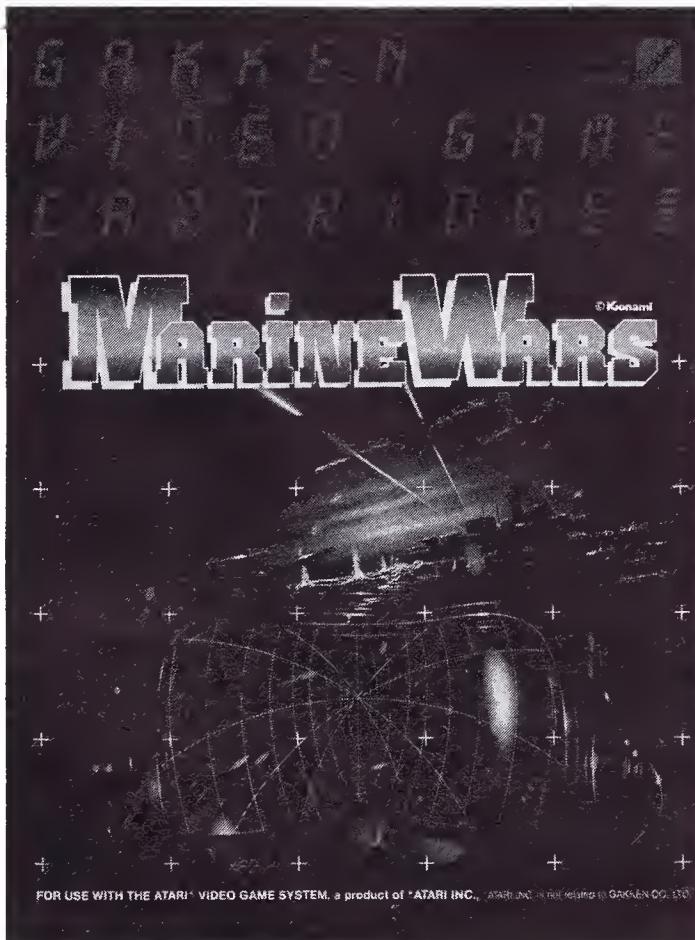

In Round two you move along the surface of the Death Star, until you become caught in a maze of laser towers. You and your X-wing fighter have to move between the towers and at the same time blast them with your torpedoes. Deadly fireballs are still after you so you have to watch out for these as well.

In Round three you reach the Death Star's Equatorial Trench. You have to make your way through a narrow passageway, flying over, under and around catwalks — and the fireballs are still chasing you!

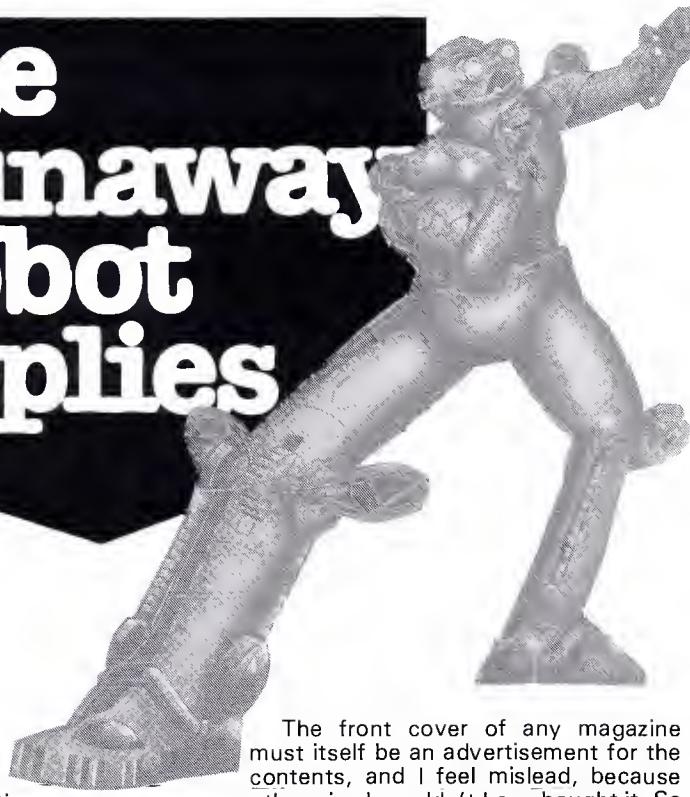

Once you have made it past all the catwalks, you will see the Main Reactor Port. If you make a direct hit with one of our proton torpedoes, the Death Star explodes.

The Rebel Base is once again safe from the forces of the Empire. At this point you advance to the next wave. The game ends when you run out of energy shields and are hit by a fireball, tower or catwalk.

Star Wars is a very enjoyable game with good music noises and 3D effects.

The Runaway Robot Replies

Dear Games Computing
Can any readers possibly help me. My problem is that I can't get any further in Sphinx Adventure (BBC, Acornsoft), so far I've collected all objects pas the crocodile eg. coins, opals, mythical ring, pearls, and other objects such as: silver diamonds, sapphires, emeralds, rubies, platinum, dragon's teeth and all other items that are essential near the crocodile and the clam.

So how do I get to the desert or are there any other items required. I would be very grateful if somebody could help me.

Yours faithfully
Andrew Oxer

Camberton

We have been getting a lot of letters like these over the past few months, enough to almost take over the entire letters page at time! So we are considering having an adventure help spot every now and then, or even regularly if possible. So if anybody has a problem or a solution to a problem like this one that stuck them for ages then write to us at our Golden Sq address.

Dear Sir

I was looking at the buyers guide in the December issue of Games Computing and found that the model BBC Model B micro computer is now £3.99.

Rupert Cook
Eastbourne

Er... Umm... Yes we seemed to have missed the point on that one...

The front cover of any magazine must itself be an advertisement for the contents, and I feel mislead, because otherwise I wouldn't have bought it. So how about a double helping for the growing band of enthusiastic Amstrad owners in the next available issue?

Yours faithfully
Mike Anders

Newport

Sorry, our covers are made up some time before the magazine is printed, so in the mean time a catastrophe may occur, such as a program found to be bugged or any other reason for not being able to publish it.

Rather than print a program that doesn't work etc. we have to pull it out.

However the contents list is 100% accurate most of the time and a quick glance at that will show clearly in large letters what machines are catered for and what the program is called, what it does etc. So I recommend you have a quick look at pages 4 and 5 before buying.

Did you enjoy 'Puss in Boots' in our January issue for the Amstrad?

Dear Editor,

I am getting a Commodore 64 for Christmas and I would like some advice on adventure games. I am very interested in adventures and I prefer graphical adventures. I am already very interested in the Marvel comics adventures. I have already bought Questaprobe. I would also like advice on which joystick to buy. It should be able to stand up to games like Decathlon but versatile enough to play conventional games such as Skramble and Ghostbusters (which I have played and think is the best arcade/adventure game I have ever

experienced). I also think the sound on the Commodore 64 is almost as good as the Atari machine. I previously owned a Commodore Vic-20 and found it good for programming etc. but the games side was quite poor. I had problems with a 16k ram pack which I bought from Chromasonic. Every time I loaded a 16k game the machine crashed and the screen froze.

Paul Donlan
Westhoughton
Does anybody have any advice?

Dear Sir

I am writing on behalf of my twelve year old son who is not only a proud owner of a Vic 20 but is an avid reader of your magazine "Games Computing".

The latest issue available in Australia at this time, is your September 1984 issue which have caused him some concern with one of your Vic 20 programs listed on page 18 (Jump Jack)

Firstly, the "RUNDOWN" on page 18 for Program 1 does not agree with the actual program on page 20 and secondly Program 2 will not run.

Having spent many hours trying to get the overall program to run (which to date has not been successful), he has asked that I write to you asking for assistance.

(Maybe your October issue advised of the correction!)

Awaiting your reply.

Yours faithfully
B.H.Watson
Australia

The program was printed correctly, but you are correct in saying that the RUNDOWN does not agree with the listing.

What happened was that when it came round to getting the listing off the tape the tape had corrupted. The author sent us another version, but he had improved it, thus some of the lines were missing and others were added. If you just type in the listing all will be well.

Dear Sir

Regarding an item called 'Megamania Madness' on high scores in the October '84 issue I would like to inform you of mine for Zaxxon on the Commodore 64 (US Gold) which is 2520660 undefeated.

This could have been higher, but I got bored. Also at some stage in the game it was found that I could not be destroyed by any means i.e. missiles, running into walls, etc. I anticipate that it was when I clocked one million but I could not be sure (it could be a bit more or it could be a bit less). The high score contained 57 confrontations with Zaxxon.

Yours
R S Hancock
Southsea
Hants

What can we say but congratulations!

Have you got any opinions to air, has someone somewhere upset you and you want to grizzle and gripe? Or maybe you're full of the joys of spring and feel like telling a happy story?

Whatever you want to say, be it good, bad or indifferent drop us a line here at Games Computing and get it off your shoulders.

Send your letters to:

'Postman Pat', Games Computing, 1 Golden Square, London W1.

THE FIRST 64K COMPUTER FOR ONLY £129!

1 800XL 64K COMPUTER £129

8 TRAK BALL £19.95

9 SUPER CONTROLLER £9.95

ATARI XL

THE NEW ATARI
XL 64K
800XL £129

EVERYTHING YOU WANT FROM A HOME COMPUTER

1. **ATARI 64K 800XL - £129:** The Atari 800XL has many facilities and includes such advanced specifications that you will be amazed by its performance. At the new reduced price of only £129 inc VAT for a full specification 64K computer with a proper full stroke keyboard, we believe that the 800XL cannot be beaten. Compare Atari with the competition, just look at these specifications:-

COLOUR CAPABILITIES: 16 colours and 16 intensities giving 256 different colours (all of the 256 colours can be displayed at the same time).

OPERATING SYSTEM: 24K ROM including Atari Basic programming language and a self diagnostic test program.

KEYBOARD: Full stroke design with 62 keys including help key and 4 special function keys, international character set and 29 graphics keys.

SOUND: 4 independent sound synthesizers each capable of producing music across a 3 1/2 octave range or a wide variety of special sound effects. (Additional programming can achieve an octave range of up to nine octaves!)

DISPLAY: 11 graphic modes and 5 text modes. Up to 320x192 resolution. Maximum text display 24 lines by 40 columns.

SPECIAL ATARI INTEGRATED CIRCUITS: GTIA for graphics display. Pokey for sound and controller ports. Antic for screen control and I/O (Input/Output).

CPU: 6502C microprocessor - 0.50 microsecond cycle and a clock speed of 1.79 MHz.

EXTENDED GRAPHICS FUNCTIONS: High resolution graphics. Multi-coloured character sets. Software screen switching. Multiple redefined character sets. Player missile (sprite) graphics. Fine screen scrolling. Changeable colour registers. Smooth character movement. Simple colour animation facilities.

PROGRAMMING FEATURES: Built in Atari Basic programming language supporting peek, poke and USR plus at least 8 other languages available. The help key will provide additional information and menu screens with certain software. Full on-screen editing is available as well as syntax checking on entry.

INPUT/OUTPUT: External processor bus for expansion with memory and peripherals. Composite video monitor output. Peripheral port for direct connection to Atari standard peripherals. Software cartridge slot is included as well as 2 joystick controller ports.

SOFTWARE: Over 1,500 items of software are available including self teaching programs with unique voice over. The range of programs includes Education, Home Management & Programming aids. There is also APX (Atari Program Exchange) and of course Atari's famous entertainment software now at only £9.95. In addition there is a host of support and help available from specialist Atari magazines like Antic and Analog and from over 75 Atari books/manuals.

2. **ATARI 400 16K GAMES MACHINE - £29:** We have several Atari 400 games computers/conssoles with 16K RAM. The price is £29 (for a reconditioned model) or £39 for a new machine. Both come with 12 months guarantee. The Atari 400 can play all 800XL ROM cartridge games and is expandable up to 48K RAM. Computer upgrade with Basic Programming Kit (£30) optional extra.

3. **ATARI 1010 PROGRAM RECORDER - £34:** For low cost storage and retrieval capability. Data transmission 600 baud. Storage capability 100K bytes on a sixty minute cassette. Track configuration four track, two channels (digital and audio). Auto record/playback/pause control/unique soundthrough facility. Built in accidental erasure prevention, automatic shutoff and 3 digit tape counter.

4. **ATARI 1050 DUAL DENSITY DISK DRIVE - £199:** 5 1/4" disks holding 127K randomly accessible bytes provide both expansion and flexibility for your 400/800 or XL system with new "helpful" DOS 3. All customers who purchase a Disk Drive from Silica Shop will be automatically given a FREE set of 100 programs on 3 Disks recorded on both sides.

5. **ATARI 1020 COLOUR PRINTER - £99:** Printer and Plotter with four colour graphic print capability. 40 column width printing at 10 characters per second. Can print 5, 10 and 20 characters per inch. 64 character sizes. Prints text in 4 directions. Choice of line types.

6. **ATARI 1027 LETTER QUALITY PRINTER - £249:** For word processing letters in professional type. Print speed of 20 chars per second.

7. **ATARI TOUCH TABLET - £49:** Enables you to draw and paint pictures on your T.V. screen, with the touch of a stylus.

8. **ATARI TRAK BALL CONTROLLER - £19.95:** Enables cursor movement in any direction and adds arcade realism to your games.

9. **ATARI SUPER CONTROLLER - £9.95:** The ultimate joystick with double fire button to give you a greater competitive edge in your games.

SILICA SHOP ARE THE No1 ATARI SPECIALIST

Silica Shop are now firmly established as the No 1 Atari retail/mail order and wholesale specialist in the U.K. We already offer our service to over 120,000 customers, 10,000 of whom have purchased Atari Home Computers. Because we specialise (and with a turnover of £1.5 million), we are able to keep prices low by bulk purchases. Ring one of our 45 staff and we will be glad to be of service to you. Complete the coupon below and we will send you our Atari pack with our 16 page price list and XL colour catalogue:

EXTENDED TWO YEAR GUARANTEE: We are an Atari Service Centre, able to service and repair Atari equipment and have added a 12 month guarantee to the year offered by Atari, giving you a full 2 year guarantee on your new XL computer.

SPECIALIST SUPPORT: Our technical staff are always available on the telephone to help and advise you. We endeavour to hold stocks of every Atari compatible item available in the U.K. and we stock over 75 Atari books and manuals.

AFTER SALES SERVICE: When you purchase your equipment from Silica, your name will be automatically added to our mailing list. You will then receive price lists, newsletters and details of new releases and developments, as well as special offers which are exclusive to Silica Atari Computer Owners.

LOW PRICES: Our prices include VAT and are extremely competitive. We will normally match any lower price offered by our competitors.

FREE COMPUTER OWNERS CLUB: This is open to all Atari computer owners irrespective of where you purchased your equipment. Membership is FREE and entitles you to receive bulletins giving details of new releases and developments. Send now for your FREE information pack, price list & colour catalogue.

PAYMENT: We accept cash, cheques, postal orders and all Credit Cards. We also offer credit facilities over 1, 2 or 3 months, please write for a written quotation.

NEXT DAY DELIVERY - FREE: All orders despatched from Silica Shop normally by 12 noon will receive a FREE Securicor delivery service at our own expense.

So fill in the coupon below with a literature enquiry or order and begin to experience a specialist Atari service that is second to none.

BOXING

In this game for the 48K ZX Spectrum you can try to batter hell out of such well known opponents as Ali, Bruno and Rocky. You can control the movement of your figure on the screen as he runs around the ring jabbing and punching your antagonist.

Control keys are 1 and 0 for left and right movement with M to throw a punch. The game is played out in full graphics with the multi-coloured boxers standing four character cells high.

Ding, ding, round one. . . .

Variables Used

O,A,B	Ring
F	Computers boxers position.
Y	Is movement of computer's boxer.
G	Position of players boxer.
HIT	The strength of players punch.
PUNCH	The strength of computer's punch.

The main difference from other computers are the sono and graphics. Also when I have put 'Randomise USR 0' just replace it with an END statement.

RUNdown

Lines	Action
10-50	Prints ring.
60-210	Prints boxers.
220-225	Movements of players boxer.
226-233	Punches of both boxers.

1500-2000	Prints punch.
3000-3025	Asking for name of boxer.
3040-3070	Using the variable 'H' to get the name of the computer boxer.
3700	Printing the names of the 2 boxers.
4011-4513	Printing the boxers after being hit down.

4720-5050	Printing success rate.
5070	Printing "You are the new World Champion".
7000-8000	Asking if you want another go.
8030-8190	Instructions.
8600	The knockout.
8700	Players boxer being hit down.
8710-8900	Seeing if fight has been stopped.
8990-9969	UDG's.

G·A·M·E·S

OF THE FILMS

Last Games Computing revealed the computer version of the games 'Ghostbusters' and 'Alien'. Ghostbusters has since become a chartbuster and is immensely popular.

This month Mike Roberts looks at two films that couldn't be further apart. The Last Starfighter is a hi-tech science fiction fantasy with very heavy use of computer generated imagery. Give My Regards To Broad Street is a musical starring a couple of the Beatles and Tracy Ullman. Let the cameras roll...

The Last Starfighter

The Last Starfighter kicks off with our hero, Alex Rogan, as an arcade ace cooped up in a trailer park in Deadsville USA. His consuming passion is to get out of the life that he is living at the moment. This ambition is destroyed when the bank turns down a loan for him to go to college (there is no grant system in America, students get loans from banks to be paid back later in life when they have 'made it').

Feeling pretty browned off at the prospect of living in a caravan for the rest of his life, Alex shoves whatever the American equivalent of 20p is into the slot of his Star Fighter arcade machine. He goes on to create an all time record breaking score and destroying the mother ship etc, etc. (I'm sure you know the story), this is done to the cheers of all his neighbours that have

gathered around him in awe.

Later that night while Alex is wandering down the road in contemplation of his fate, a strange looking car pulls up — looking very similar to a Lotus Esprit. That is, if you forget that it can go at 300mph and fly. Because after a hairraising run and a near crash into a broken bridge the car takes off! Not only does it take off, but it keeps going, and going, and going until, as a space ship the alien — otherwise known as Centauri — flies Alex to the planet Rylos, the same planet Rylos as featured in the video game — curioser and curioser...

It turns out that Centauri is recruiting beings to join the elite (pardon the pun) fighter squadron called the Starfighters(gosh!) to save the world from the menaces of the Zandozan armada. And the arcade machine is really a tester.

To cut a long story short, after much travelling to and from Earth Alex agrees to join the Starfighters — the only problem is that when he gets back to Rylos he discovers that all the pilots and ships have been destroyed apart from his and his navigator, Grigg — a sort of six foot high gheila monster.

Does Alex save the universe? Does he get the girl? Does Centauri survive? etc., etc. . . Well I'm not telling you — go and see the film.

The film has 'Lorimar' stamped on it somewhere, and they make 'Dallas' so you can see that the plot is a bit odd — even though, at the preview a whole cinema load of hardened hacks cheered when the soppy bit finally happened.

Down to Graphics

The most incredible part of the film and the bit that is getting the most publicity at the moment, is the long sequences of computer animated graphics. All the animation was done on a Cray XMP computer. There are very few Cray 1s or XMPs around and the popular press has taken to calling them 'Super Computers'. Super or not, these

types of computer are the fastest and most powerful computers available. The Cray is so big that you need a VAX just to control it. VAXs are not small, in fact they alone cost £50,000 — not bad for a glorified keyboard.

The images produced, as you can see from the cover are extremely complex. The most detailed is the Gunstar, the last starfighter itself. This is made from 750,000 polygons — individual shapes. The original design was done on a three view drawing, much like the plans for a modern jet, digitized, and then made to come alive inside the memory of the Cray XMP.

The computer work was done by a company called Digital Productions. They are the people that brought you *Tron*. The five minutes of computer animation that features in *Tron* was created on a Cray 1. The *Last Starfighter* has around 25 minutes of graphics, and the cost is comparable to what it would cost a film to be made with models!

Atari are bringing out an arcade game version of the film of the game (work that one out) no details are available yet of its game play or format, though it is rumoured to be similar to the game as featured in the film.

Give My Regards To Broad Street

This musical spectacular, written and starring Paul McCartney, has already had a couple of its songs rise high in the charts. The theme of the film is that a master tape of an album has been stolen, and he needs to get it by a certain deadline.

There are 14 songs in the film, including some old Beatles numbers which are performed by McCartney, Ringo Starr and a whole mish mash of other musical performers like Dave Gilmour from Pink Floyd, John Paul Jones from Led Zeppelin, and 10cc's Eric Stewart.

The resulting mega-group produces some excellent music. Oldies include 'Eleanor Rigby', 'Good Day Sunshine', and 'Yesterday'. New songs written especially for the film include the hit 'No More Lonely Nights' and some others.

The film is full of fantasy and dream sequences including one where there is a flying carpet, and a Victorian scene. Another point of interest is the

customised Ford Popular car that McCartney uses to drive around in. The film has a simple plot, but the music and film sequences really make the film.

Computer Conversion

The game of the film is called 'Broad Street' and follows the theme of the film. The McCartney music is missing and various people across London can remember bits of it. You, as McCartney, must drive your Ford Popular around London to talk to these people and slowly piece together what the music should sound like. To help you your car is equipped with a sort of computer locator that will help you find where the people are. To hinder you there is the world infamous London traffic and traffic wardens!!! Also the bad guy from the film is after you.

All throughout the game 'Band on the Run' is playing in the background, for some musical accompaniment.

Broad St (the game) was written by Concept Software marketed by Mind Games and will be available for the Commodore 64 and the ZX Spectrum.

SOFTWARE

JETBOAT

Runs on: BBC Model B
Made by: Software Invasion
Price: £9.95

Following up their epic 3D Grand Prix, Software Invasion have gone for another three dimensional type game. This time the player is racing a "Jet Boat".

The loading procedure is long, with lots of graphics (courtesy of Quicksilva's Beebart). The best feature is that you can redefine the keys for left, right and accelerate, choosing any keys which suit you best.

The interminable loading time (interesting block countdown from &FF) is worth every second. A screen full of "Jet Boat" scrolls sideways to reveal a twisting and turning course of blue water through a variety of landscapes, walls, buildings, farms and castles. The ready sign disappears to reveal the Jet Boat on the starting line.

It's captained by a sporty looking sprite but it's you that has to come up with the fast reactions and judgement to guide Jet Boat through the course.

There is a good mix of bends, wide passages and slim straits to test your skill. As each lap is completed within

the time limit (if you don't make it the game ends and the high score table appears) more objects appear along the course and make things pretty hairy. The sea monsters and sandbanks push you to the limits of concentration.

The game is compatible with joysticks but I preferred the fine touch of keyboard control. If the boat gets stuck on a bit of land (you can plough your way across land and through buildings if you really want to!) it is best to get off by the quickest route rather than continue on your current heading. It doesn't matter how much of the boat is touching, you just grind to a near halt.

The action is very smooth, impressively so considering the amount of landscape and features that go whizzing by the Jet Boat as it accelerates away. Sound is OK and can be switched on and off as wished. You also get a freeze option. Quite a game, original, challenging and nerve pinching.

Mr. Ee

Runs on: BBC B
Made by: Micro Power
Price: £7.95

In this game, Mr. Ee you control a wizard tunnelling underground. You, Willy the wizard, have an objective in life, it is to collect cherries which, for some reason have been left underground. To stop you achieving this goal there are some

rather unfriendly creatures called UMPHS. The umphs cost you one of three lives every time they make contact with you. Fortunately you can kill umphs. One method of killing them is pushing an apple (also buried underground) so it falls down a tunnel and crushes the unsuspecting umph. The second way is to throw the crystal ball you have in your hands which bounces down the tunnels until it hits an umph or returns to your hands. After all the cherries or umphs have been eaten or killed you progress to the next level.

There are no skill levels as such but instead each screen is progressively more difficult. Joysticks may be used and make the game a little bit easier. All in all Mr. Ee is a good game and is very addictive.

DUNE RIDER

Runs on: BBC B
Made by: Micro Power
Price: £7.95

Dune rider is an interesting variation on the old theme of Moon Buggy. The instructions tell you that you are one of the few remaining humans and you must deliver something to the other side of the planet. This may sound a bit vague but in fact the game is not so at all. You set out from your base in a dune mobile which has eight wheels and ideal for the purpose. The terrain is not easy, there are lava pits and radioactive rocks which you must jump. As if that isn't enough unfriendly aliens whiz about at the top of the screen dropping bombs. There is one thing that decreases faster

the your number of lives and that's fuel. The only way to stop running out of juice is to shoot the alien tankers which then drop you a couple of gallons.

There are no skill levels but each 1000 points you score a different set of aliens appear which are even more deadly than their predecessors. All things taken into account dune rider is a fun game and well worth the money.

B.C. BILL

Runs on: Commodore 64

Made by: Beau Jolly

Price: £6.95

As the name suggests the scenario of this game is set in prehistoric times where polygamy was the norm. Bill is the character around whom the game revolves, as it is his task to capture and feed an evergrowing family (in terms of number of wives). The task therefore requires Bill to collect as many wives as possible (who just happen to be wandering around looking for trouble!), by clubbing and dragging them back to his lair. This then leads to the appearance of the children. All of whom have to be kept well fed by clubbing wandering food, cooking it and then taking it back to the cave.

Each wife and child requires one unit of cooked food per season to keep them satisfied. But if these meagre requirements are not met then the wife with her children will depart in search of another home. If the entire family decides to leave then Bill dies of a broken heart (besides other ailments). As the seasons visibly change, the wives that are well fed each produce one offspring at regular intervals, thereby increasing not only the family but also the fight for survival.

To make life a little less mundane, carnivorous dinosaurs wander about eating anyone in their path, and occasionally his cave is attacked by various raiding parties. The sole means of defence are provided by the constant waving of Bill's club.

To ease the pressure, each child leaves home after 3 years to fend for themselves. Bill's directional and club movements are controlled by the keyboard or a Joystick.

The game is addictive though it does become increasingly difficult as the area overflows with wives, kids, food, and dinosaurs.

ICE HUNTER

Runs on: Commodore 64

Made by: Anirog

Price: £5.95

The hero of this game is called THORAK the legendary Eskimo prince of ice. It is your task to guide Thorak in his quest for the ice blocks that would help him to build an igloo.

Scattered about the various levels of

the cave are the ice blocks that he needs. All Thorak has to do is to push the blocks of ice on each of the levels until they fall through the holes to the levels below until they can all be accumulated on the lowest level of the cave where there is an underground stream, which can be used to float the ice blocks to a place where he can build his igloo. The gaps are covered with thin ice and can only bear Thorak's weight once before the ice breaks leaving a gaping hole.

The cave has five levels where creatures wander causing death upon contact. They can however be destroyed by dropping a block of ice through the holes upon them or by eating the power pill which occasionally flashes on the screen and crushing them underfoot.

To move from level to level, Thorak has to use support pillars. Once having collected all the ice blocks in the stream Thorak then has to return to another cave where the number of blocks and deadly creatures increases, thereby making his task even more difficult. There are 6 caves in all for Thorak to traverse.

The game can be played by using either a joystick or the keyboard with a one or two player option. The game also has a pause feature which I found extremely useful whilst I contemplated my next manoeuvre.

TERRAHAWKS

Runs on: Spectrum 48K

Made by: CRL

Price: £6.95

TERRAHAWKS is supposed to be based on the TV series by Gerry Anderson, I say supposed because apart from the name I cannot really see any connection with the puppet show.

The game opens with a quite impressive sequence as stars rush by your rocket ship as you descend into a black hole. The only problem with this part of the action is that you have no control over it, whatever you do you descend into the black hole. The object seems to be to find the vortex of the black hole and fly into it whilst avoiding the 'green monoliths' that line the black hole. I spent quite a bit of time flying around the black hole looking for the vortex but was unable to locate it, the instructions are not very clear and I really wasn't sure if I was playing correctly or just that the game is too difficult. Certainly the graphics are well done with the view out of the space ship lined with all your instrument panels which were quite detailed and all seem to represent something but still I really couldn't work out what was happening. The 'green monoliths' were a bit of a disappointment being only 3D rectangles that just sort of sat there as green monoliths are prone to do waiting to be shot at or avoided.

FOR THE ZX SPECTRUM 48K

I somehow got the impression with this game that the programmer knew what he was doing, with a nice opening menu and display sequence and well laid out screen display but the story line seems to have got left by the wayside. On the assumption that the programming is the hardest part to do it is a pity that a bit more effort didn't go into the action itself.

SWAG

Runs on: BBC

Made by: Micro Power

Price: £6.95

Swag is primarily a two player game but with a practice option for a single player to joust with the computer; however be warned that as a single player you will be more than fortunate to win — so bring a friend.

As with most Micro Power offerings this is a very acceptable multi faceted arcade type game. Stylishly drawn with full colour graphics this program has more than the usual friendly functions including the giving of a specified player a head start.

The object of the exercise is the accumulation of cash over and above that of your opponent who is striving to achieve a common goal through similar means. Both are trying to steal £250,000 in diamonds whilst shooting each other and defying killer Droids respectively called Henrys and Percys. With Police cars rarely offering assistance and drinking cans of beer it's not surprising that the sanctuary of your home remains very elusive.

REVIEWS

SOFTWARE

Being a two player game the placement of the keys are most important and fortunately in this case they are as convenient as one could hope, however you do have a joystick option should you be fortunate to own a compatible pair.

This package represents value for money consistent with the many similarly featured arcade games at the moment, but it's two player aspect which I feel will influence a potential buyer for or against it.

GILLIGAN'S GOLD

Runs on: Commodore 64
Made by: Ocean
Price: £7.95

Here is a game that has an extremely uncomplicated plot and so it proves my theory that some of the best games are those that have the simplest storylines.

The scenario has Gilligan in a gold mine where the gold has been mined and placed in bags, strewn in the shafts deep within the mine. The basic object of the game is to use Gilligan to collect all of the bags of gold and place them in the wheelbarrow, at the top of the screen/mine, before the time runs out or the Outlaws get you. Gilligan's movements are controlled with a joystick in either port 1 or 2.

The entire mine is spread over three screens which scroll as you move to the edge of the screen either left or right. Different levels of mine shaft are connected either by ladders or continuously moving lifts.

Loss of life can occur when Gilligan falls down a mine shaft, runs out of time or is accosted by a bandit. Bandits can be temporarily stunned by dropping a bag of gold through a mine shaft, on top of them.

The game's status as displayed on the screen shows the current score, high-score and number of lives remaining. At the start 4,000 units of time are allocated and these steadily decrease as the game progresses. Each bag of gold that is deposited in the wheelbarrow gives Gilligan another 4,000 units of time to attain the next bag of gold.

The graphics are excellent, in that they are extremely realistic and good use is made of the Commodore's music facilities.

I found this game to be exceedingly addictive as I found myself repeatedly playing the game with the incentive of going for just that one extra bag of gold each time I lost a life.

SANTA AND THE GOBLINS

Runs on: TI99/4A
(unexpanded)
Made by: Intrigue
Price: £5.95

This is a novel and topical (at the time of writing) mixed graphics and text adventure game. I say 'mixed' because in ordinary TI BASIC it takes some time for scene changing to take place and the screen also clogs up with questions and answers. The graphics are simulated 3D and use the same basic format with changed colours and doorways for each scene. There are a number of interesting features associated with the game. First, a word list of verbs and objects is provided.

You are told how to combine them to form abbreviated commands which are thus simple to enter. Second, it is possible to ask questions of characters in the scenes. Third, pointers as to what rooms exist are given by a friendly elvin which wanders around the mansion where the action takes place letting you know its location. Santa must find the children in the mansion and deliver boys and girls presents whilst taking sustenance from a finite number of mince pies. When the supply runs out the game ends. On his journey through the various rooms of the mansion, Santa encounters sneaky goblins which steal things from him and deposit them in other rooms. During his wanderings Santa may discover a magic lamp, lamp oil, matches, a wand, goblin stoppers and a mysterious map to help him in his quest. The title seems to indicate that it is aimed at a more junior audience and as such it is a well judged introduction to the adventure games style. It also remains challenging to adults and thus makes an excellent family game. The packaging is good quality, the instructions helpful and lucid and the game very good value for money.

SIR LANCELOT

Runs on: Spectrum 16K
Made by: Melbourne House
Price: £5.95

Another good game by Melbourne House. This one though is an adventure/arcade game with 24 screens, 7 aliens, moving stairways, and all on a 16K Spectrum.

The game loaded first time with good display of graphics. The game opens with a good title screen and when you are playing you notice the extreme quality of all the graphics and animation involved in the game.

The game plays extremely fast and all animation involved in the game is very smooth indeed. The game plays very well and you have real control. The game is a multi-level game with each room in the castle totally different. You have to travel into every room of the castle and before leaving a room you must collect every item in that room. To make a challenge you must dodge the aliens. The game followed the trend of many arcade games now on the market. This copy is of a very high standard. The only limitation was on the sound. No crash problems were encountered.

The game follows a trend of Melbourne House's to produce high class games. The game varies of a theme of high standard adventure games. My verdict on the game is that it is definitely worth the money with superb graphics, useful sound and ALL on a 16K machine.

MICROMEGA

For 48K Spectrum

by Derek Brewster

**JASPER**

Runs on: Spectrum 48K
 Made by: Micromega
 Price: £6.95

Every now and then a game comes along that is a pleasure to play and to watch other people play. Such as game is JASPER in which the hero is a mouse (for some reason I kept thinking that Jasper was a kangaroo) whose objective is to get from start to finish through 22 screens without getting duffed. Along the way are various objects that are required to make your journey possible. You are only able to carry five objects at once which are then placed in boxes at the top of the screen for future use and there is a real time clock so that with each playing you can improve your time score.

Where Jasper really wins is in the excellent use of graphics with beautifully animated creatures and very smooth scrolling screens, this just shows what can be done with a Spectrum in the hands of a good programmer.

JASPER can really be described as a arcade/adventure game with almost cartoon like characters. Jasper can jump over other animals (perhaps that is where the feeling of a kangaroo comes from) swing through the trees on a rope and jump off platforms and float down to earth using an umbrella as a parachute. It really is a joy to watch the big cats stalking across the screen and the bunnies hopping everywhere. There is plenty of action on each screen and you need a combination of quick reflexes and careful planning to make your way through all the screens.

One thing I would have liked to see would be the option of using a joystick but I understand that as so many keys have to be used it could prove a problem but the keyboard controls are very responsive and do not require you to have 258 fingers going at the same time so perhaps the joystick option is not too important and certainly does not detract from the game at all.

If you are only able to purchase one game a month for your Spectrum then I would make this your next one, I would even go as far as to say if you are only able to buy one very six months then make this the one as I am sure that its addictive value will keep you going for most of that time. Well done Derek Brewster, another Kentilla.

**KOKOTONI WILF**

Runs on: Spectrum 48K
 Made by: Elite
 Price: £7.95

The game came in a neat package with good, clear and concise instructions. The game is one of Elite's finest games. Elite have a good name in software and certainly live up to it in this game.

The game loaded without any problems whatsoever and continued to do this. The idea of the game is to collect the many fragments of an amulet smashed several million years ago and scattered throughout time. You have been sent on the quest to go and find all the fragments of the broken amulet. The mage who sent you has given you one aid — a pair of wings (so you have

the ability to fly) Control is by the Q and W keys and O to fly. You can combine the use of these keys to get very effective movement indeed. Graphics are superb and are used just about everywhere. Giant dinosaurs and sharks are a small (very small) sample of the type of graphics encountered in playing this game.

The game played very well and handled very well too. Sound was limited but what can you do with a Spectrum? There is the beat of his wings when flying. Apart from this I have no criticisms of the game. I thoroughly recommend this game to anybody.

MANIC MINER

Runs on: BBC B
 Made by: Software Projects
 Price: £5.95

Converting games from more popular machines to less popular machines is becoming a common idea with many software houses. Manic Miner, in my opinion, will turn out to be a best seller for the BBC B. To my surprise the game is identical except for the fact that only four colours are used and there are four less screens. Despite this minor (sorry!) failing, the game is nothing short of brilliant. For those of you who aren't acquainted with the Manic Miner for the Spectrum I'll fill you in. You control miner Willy who has stumbled across an abandoned mine. Unfortunately whoever abandoned this mine forgot to stop all the mining robots who now try to get in miner Willy's way, while he collects the goodies. The goodies consist of gold keys, gems and gold boxes and basically all the other things you find in your average abandoned mine.

There are 16 screens all together, each only accessible after all the items from the previous screens have been collected. Manic Miner will provide hours of fun for any Beeb owner and so is a must especially at such a price.

3D GRAND PRIX

Runs on: BBC
 Made by: Software Invasion
 Price: £9.95

Despite the weird loading addresses this game was accepted by the computer without problem time after time. The curtain eventually opens at the Silverstone race circuit.

I must admit I approached the game warily upon seeing that the graphics were accredited to the drawing program 'Beeb Art by Quicksilva' — however the representation of both car and landscape were more than satisfactory being very well drawn. The fact that you can select from eight different race circuits, have keyboard or joystick

REVIEWS

SOFTWARE

option and even an adjustable volume control constitutes the good news regarding this game, now for the bad.

In order that a game be enjoyable it must by nature be realistic (as in a simulation such as this) and playable — unfortunately I found 3D Grand Prix to be neither. Cars appear as if by magic from nowhere only to settle down on your front bumper; try to overtake them and frustration really sets in! The only way that a car in front can be overtaken is to go well onto the grass away from the track and risk incurring assault by a marker post... surely this can't be right? It is not realistic to overtake off the course and as the opportunity to do even this successfully is rare the game is not playable either.

Not wanting to criticize an otherwise excellent Software house I even sought the opinions of my friends and colleagues who had bought this programme only to meet with the same frustrations, so it isn't just my inadequacy.

Normally I swear by Software Invasion, following their new releases closely, this is the first occasion I have ever felt like swearing at them.

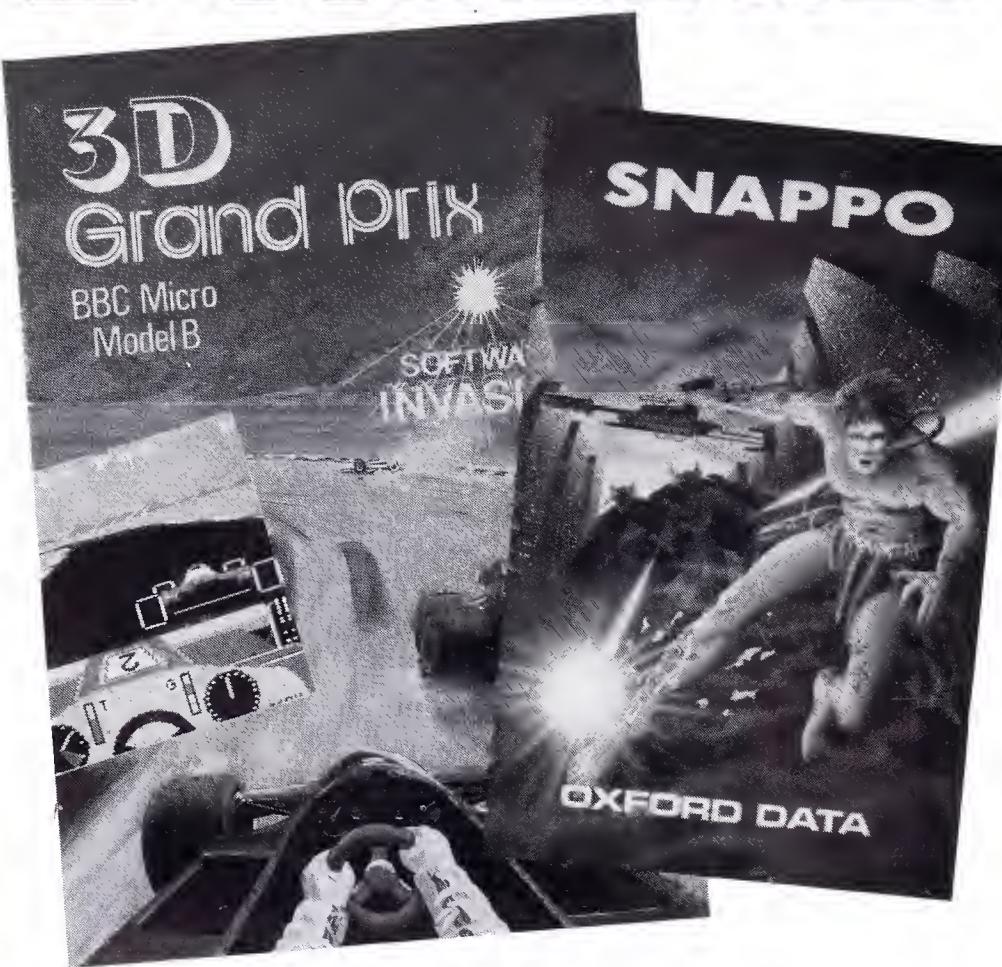

SNAPPO

Runs on: Memotech MTX Series
Made by: Oxford Data
Price: £6.95

This game is of the Pacman-Munchman variety. For those yet unexposed to this game, the idea in this version is to guide a little pig's head around a maze to gobble up dots in its path. Bonus points are gained from eating fruit which appear from time to time. Snappo is chased around the maze by chasers which gobble him up if they catch him. There are four of these which start in a central pen-like area of the maze and venture out after giving Snappo a head start. In the maze corners are flashing booster packs which when eaten enable Snappo to eat the chasers for bonus points. Their ghosts return to the pen to be reborn again. When they start to flash and change back to their original shapes they are still edible, but signalling that they are about to become active chasers once again.

If Snappo clears the maze of dots then he progresses to a higher level with further chasers and more fruit to eat. There are tunnels at the sides of each maze down which Snappo can escape whilst being pursued. Chasers can only travel half speed down these which gives Snappo the edge in getting away. In addition, he reappears at the other end of the maze having hopefully lured all the chasers to the side he exited from.

This version is a faithful rendition of the original and has good clear graphics and sound effects. The movement is smooth and control good by either joystick or keyboard.

The on-screen instructions are clear and expand on the brief printed ones. There are three lives per game. The ones left and the score achieved are shown on screen. There is a high score table for the top eight scores. The packaging is good and identical to Continental Software's in style. Indeed the game seems to come from the same stable.

Even though it is now a somewhat dated game, this one still holds the interest — well, at least for a little while. If you have to have a 'pacman' at all costs then I suppose this is reasonable value for money.

CU * BERT

Runs on: TI99/4A (unexpanded)
Made by: Stainless Software
Price: £5.00

Cu * bert is a small shrew-like creature who starts off in the bottom most left hand box of a pyramid of cubes. By moving him to the other cubes using the keyboard you can change their colour and your points. The colour the cubes will change to is displayed at the top of the screen along with the top score and the score for that game. A round is complete when all cubes have changed

colour. Pyramid colours change with each round and levels get more difficult.

Cu * bert has three lives per round. The number of the round and level are also displayed on the screen. Since colour is integral to the game, you are asked on running if you have a colour TV so that appropriate patterning can be made for black and white if you haven't. Cu * bert must avoid both descending black and white balls which bounce between squares and creatures which appear on the screen and which can change colours back again. After scoring 750 points you can take avoidance action by jumping to the bottom middle square of the pyramid which is marked with a plus. The keys chosen for play take some getting used to since they are set with left and right controls for up on the right hand and left and right for down on the left. If deliberate this seems an unnecessary complication, if not, then why no option to reset keys to a more logical setting, like up and down on left and right hands respectively for those sides.

The graphics are reasonably colourful and relatively smooth for unexpanded TI99 basic and the sound quite good. The least said the better about the limited instructions and packaging. It's quite an addictive game and seemed good value, but when I was doing quite well, the game crashed with a 'Bad value in 3400' message. After that I rather lost interest.

MINESHAFT

Runs on: BBC Model B
Made by: Durell Software
Price: £7.95

Mineshift by Nick Wilson and Julian Todd is a very nice implementation of this old favourite. Incidentally Durell seem to be following up an idea started by the video companies in colour coding their cassette boxes and tape. A warning appears on both card insert and screen about the possibility of your program being a forgery. Rest assured your reviewer has checked it out and his is for real!

The idea of the game is to guide your hero (he looks like an ordinary member of the public who has accidentally fallen down the shaft) around the ledges, crumbling paths and moving belts of 20 different rooms. One the way you collect lumps of coal and bonus points.

Extra earnings are gained for mastering the disintegrating sludge and getting out of the room with the air supply still fairly full. It is possible to flip to the next room by using Escape if you are getting stuck.

Mineshift graphics and sound are pretty good although you always have the superior versions for other computers in the back of your mind. The best news is that Mineshift is very playable, with a good feel at the keyboard, fast response and smooth action.

There isn't quite as much going on per screen compared with a Blagger or Son of, nor are the graphics as detailed. Playability is ultra important with a game like this and is where Mineshift scores over its rivals.

ROO

Runs on: TI99/4A (extended BASIC)
Made by: Stainless Software
Price: £5.00

Roo is a runways and ladders style game in which a mother kangaroo is in search of her baby which is being held captive by monkeys.

On screen one Roo has to move along runways and scale ladders to reach the top of the screen where her offspring is imprisoned. She must avoid or confront apples which move sideways across the screen in her path. There are three methods of doing this. Firstly, by jumping over them, secondly, by ducking under them (screen one only) and finally, by punching them into apple cores for bonus points. The apples seem to appear more often if you punch them, though the instructions say the opposite. On the way, Roo can jump, collect fruit and bells for extra points.

On reaching the monkey's cage containing the baby at the top of the

screen, you move on to Screen two. On this Roo must jump up a staircase of logs suspended by vines whilst avoiding more apples travelling horizontally across the screen. Again there are bonus points for fruit and bells collected. Similarly, on reaching the top of this screen you go on to the third screen. This is somewhat different with a column of monkeys supporting the baby in a cage. The monkeys have to be punched out to rescue the baby. As well as horizontal apples to contend with, there are vertical ones to dodge on this screen. Game score and high score appear on the screen. The graphics are clear and smooth and the colours tasteful. It's a frustrating game initially until you get the hang of the keys used (why no joysticks?) to control Roo and until you realise the techniques of dealing with the apples and obstacles. Thereafter, I found it relatively easy to play and was somewhat disappointed that there were only three screens to the game.

In this sense, the level of difficulty didn't seem to increase appropriately either. The instructions are brief but adequate and the keying sequence appears before each game. Expanded with joystick control, this could be a really good game. As it is, it is cheap enough, but seems incomplete and insubstantial.

TAPEWORM

Runs on: Memotech MTX Series
Made by: Continental Software
Price: £6.95

Aesthetically, this is a delightfully presented game from the word go. To the strains of 'wooden heart' you are presented with a simple menu which enables you to go straight into the game at the difficulty level you require (1 is easy and 9 is hard) or go to the instructions instead. These are clear, logical and tastefully presented. I have the suspicion from the layout that this game has the younger members of the family as a target group. For example, instructions are got by pressing I, more instructions by pressing M and playing the game by pressing P — simple, self explanatory and very effective.

The game itself involves directing a two segment tapeworm around a maze full of pips. As you eat the pips the tail of your tapeworm grows as does your score. Eventually all the pips are devoured and the tapeworm has grown to its maximum. If you hit a side wall or try to eat yourself as you go along then you will lose a life of which there are three per game. When this happens a message warns you that a life has gone. If you gobble up cherries en route then you earn yourself a 250 point bonus. When you clear all the pips on the first level you get a bonus of 750 points. Throughout the eight levels which follow the tapeworm gets bigger at an

TAPEWORM

increasingly quicker rate and the pips have greater values.

The colours are well chosen, the sound effects interesting and somehow sympathetic when you lose a life. High score, game score and life being used appear on screen. Conceptually it is a simple game, yet its fresh colourful graphics make it an inviting game to play nonetheless. It is well packaged, moderately challenging and moderately addictive and should appeal to the kids. It represents reasonable value for money.

JUMP CHALLENGE

Runs on: BBC
Made by: Martech
Price: £6.95

Jump challenge is a very well marketed program from the game concept through the packaging and the incentives.

The concept is of its type a novel one this being the first purpose designed program to cater for the current craze of stunt cycling and obstacle jumping. With joystick, sound and colour options the game location is an arena within which we see a stunt cyclist whose aim is to please the assembled crowds with dangerous jumps over a variety of transport. The only limitations dictating you, the cyclist's, achievements are your abilities in controlling firstly a BMX bike and finally a fully powered motor cycle. The program proceeds by degree, if you manage to jump the barrels on your BMX so you progress on a motor cycle over increasing quantities

REVIEWS

SOFTWARE

of jeeps and trucks; far more difficult than it would appear.

Juggle with acceleration and length of approach, contend with wheelies and hopefully get everything right at the same time.

The graphics and sound are both of a very acceptable standard and although the game idea is quite simple it still holds that all important addition quality. Well packaged and appealing to the eye, with stickers and a competitions, the program should also find quite a few impulse buyers.

COPPER CAPERS

Runs on: BBC
Made by: A & F
Price: £6.90

It's more than normally difficult to write about this game as it is hard to criticize and yet it does not merit great praise. Probably the most realistic appraisal of its worth can be best illustrated by saying 'beauty is in the eye of the beholder'.

Instructions are on screen and are more than complete, their appeal being enhanced by scrolling in the manner of 'Ghouls'. Whilst there is no alternative

Your role is to rescue survivors from the sea whilst at the same time killing submarines and avoiding Air-ships. There Air-ships fire heat seeking missiles whose accuracy grows as the levels of play progress. Accumulate points for successful rescues and for kills made and finally proceed up the customary Hall of Fame table upon completion.

Following your achievements every two levels of progression sees an added task being that of landing your helicopter accurately on a points graduated landing pad avoiding other craft and defying the elements.

There are many nice touches within this program including descending ladders, good sound effects and pleasant graphics but, if you're over twelve years old, with little to enthuse about.

KILOPEDE

Runs on: Memotech MTX Series
Made by: Continental Software
Price: £6.95

This game from Continental Software mimics the arcade game Centipede. The program calls it 'Kilopede' so there is a bit of bad editing somewhere on someone's part. The object of the game is to eliminate a multisegmented Kilopede as it descends the screen and to knock out the stationary mushrooms which act as a sort of maze and which control the Kilopede's path and rate of descent. When you hit a Kilopede segment it transforms into a mushroom and the Kilopede carries on descending as the two left over sections in different directions.

This process continues until the Kilopede either touches your gun and you lose a life or until you clear the screen of all the bits of Kilopede, in which case you get points. The Kilopede starts to ascend the screen if you don't get rid of it by the time it reaches the bottom. From time to time animals appear on the screen which must be avoided or dealt with. If you accurately shoot them down you get bonus points. Some of these animals pursue you and others merely fall on you from above. They consist of crabs, fleas, spiders and jellyfish.

As the levels change the game gets more difficult with greater frequency of animals and quicker kilopede descent and ascent. The graphics are good with the response of the gun immediate. The firing rate is quite rapid and movement swift in all directions. Not much use is made of colour, but the sound effects provide a driving background which gives an increasing sense of urgency. There is on screen scoring with an indication of lives left. For once the instructions are very basic for a Continental program with no scoring key given. For example, you get an extra life on reaching 5000 points, but it's confusing that you appear not to at 10,000 when you need it more. You can use joysticks or keyboard to control your

gun. The box illustration is of the usual high standard. It is a good attempt to replicate the arcade game and is challenging and fairly addictive.

In that sense it is quite good value for money.

PETCH

Runs on: Commodore 64
Made by: Anirog
Price: £5.95

The scenario of this game revolves around Petch, the penguin who has stored his diamonds for safe-keeping in the garden of an old Eskimo hunter. The garden is a fenced enclosure that is littered with ice blocks from the igloo. As the weather becomes warmer some of the ice blocks begin to melt and the eggs that were hidden within them begin to hatch. From which develop two types of arctic monster, with whom contact would be fatal. So it is the penguin's task to keep as far away from them as possible. The penguin's movements are controlled by either the keyboard or a joystick.

To generalise, this is basically a game of survival whereby the penguin must avoid contact with the monsters for two minutes before he can proceed to the next level.

The monsters can be destroyed in one of two ways. The first by crushing them either between two blocks of ice or between an ice block and the enclosure fence. Blocks of ice can be moved by positioning the penguin behind the ice cube and then moving the joystick, with the fire button pressed, in the direction of the movement required. The second method of destroying the monsters is by standing against one of the enclosure boundaries and pressing the fire button. This causes the monsters in contact with the boundary at the time to be temporarily stunned so that Petch can then, for a few seconds only, crush the monsters by walking over them.

Additional bonus points can be awarded if Petch can arrange his scattered diamonds, by pushing them in a similar fashion as the ice cubes into either a horizontal or a vertical line.

The game begins with four monsters within the enclosure and an additional one with each level that is successfully cleared.

GOLDMINE

Runs on: Memotech MTX Series
Made by: Continental Software
Price: £7.95

This is a Manic Miner look alike from Continental. Your task is to collect bags of gold from the tunnels of a gold mine and deposit them in a bin at the

well put together game with good screen instructions and plenty of challenging action. I had problems with the lifts which refused to take me and left me suspended in mid air, but I suspect that was due to my lack of skill.

One of the best games for the Memotech and well worth the money.

POLE POSITION

Runs on: TI99/4A (ROM Cartridge)
Made by: Atarisoft
Price: £14.95

This is a superb game, as it should be at the price.

It is the TI plug-in version of the arcade game. Atarisoft's versions for other machines were reviewed by Mike Roberts in the Games Computing October issue. What he said there also applies here. It is one of the most exciting and realistic games going and you will spend many a long hour with joystick — no gearstick — clenched in your sweaty fist. This TI version will make 99/4A owners realize just what their computers are capable of. Almost the full range of colours is used and the sound effects and music complement the scenes very well.

The object is to guide your racing car around a panoramic 3D race track on a qualifying lap to enable you to obtain a place in the race proper. If you score top bonus of 4000 points you have 1st, i.e. 'pole position' on the grid.

During the race proper, which starts after a tonal countdown to a hooter, you have to pass other cars on the track to accumulate points. The more you pass and the shorter your lap time the greater your bonus. This is carried forward to extended play on any additional lap. When the time runs out then the race ends. You can select between a one to eight lap race and novice, experienced or advanced levels of ability. Experienced and advanced levels test your nerve and skill even more as a greater number of cars get in your way and at more awkward points on the course.

Your score, the game score, lap time, speed, passing and time bonuses all appear on screen. Speed can be changed from high to low as necessary during the race by pressing the fire button. Usual joystick controls are used for speed up, slow down, left and right. If you go round bends too fast your wheels screech, if you leave the track you get a warning beeper and slow down and should you crash into signs or other cars, you will have to start from that point again and catch the field up.

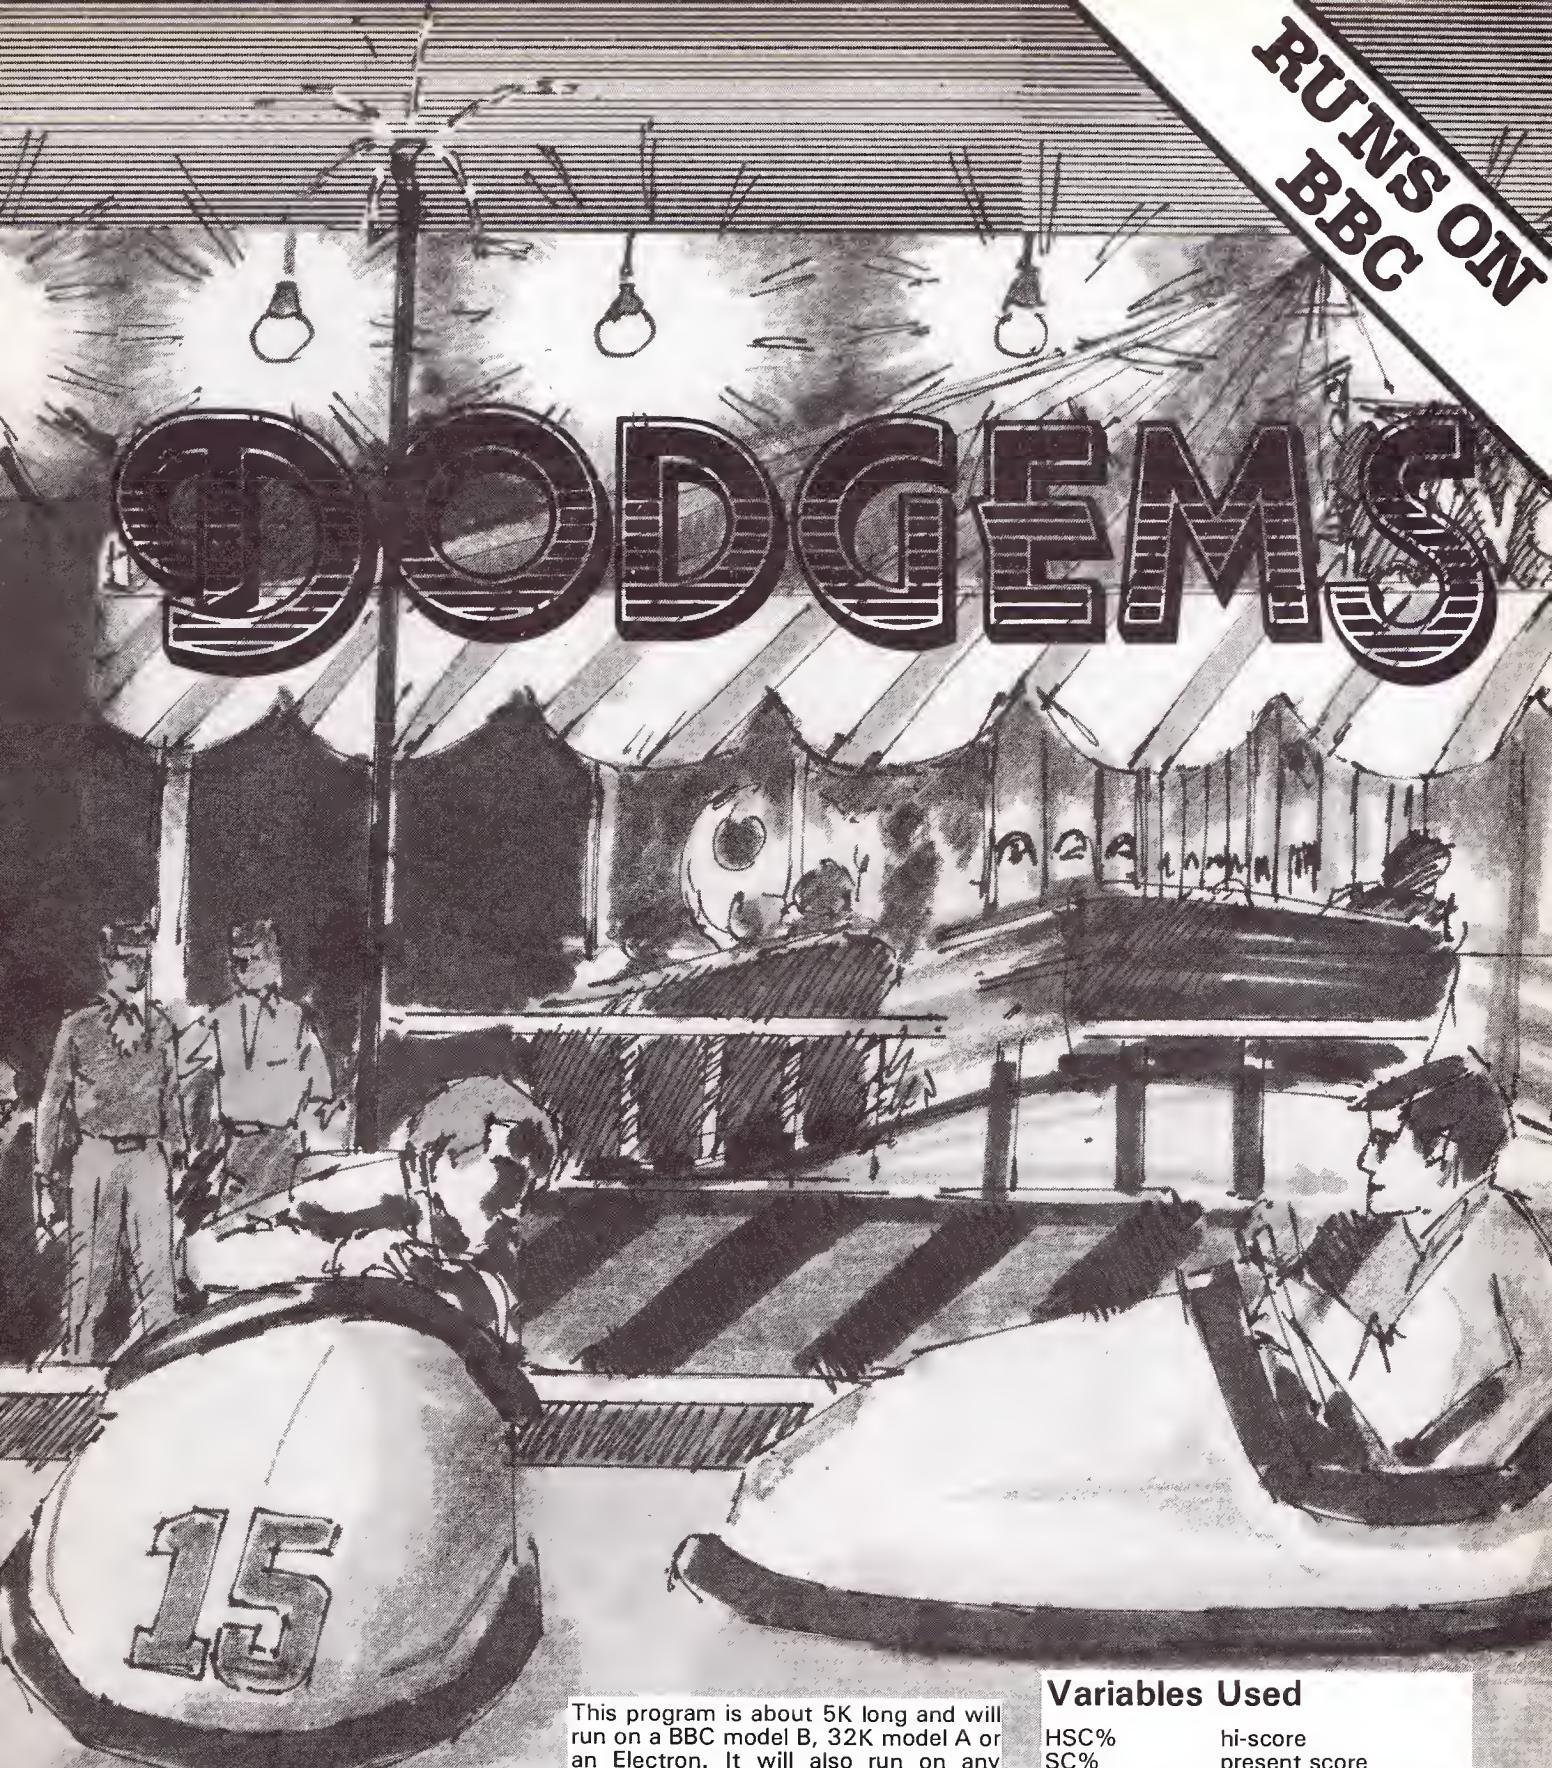

If there is any criticism it is the chunky graphics of the opposing cars and the rather angular cornering manoeuvres of your own. But that's being finicky. All told, a thoroughly stimulating game.

REVIEWS

RUNS ON
BBC

GOODGEM

This program is about 5K long and will run on a BBC model B, 32K model A or an Electron. It will also run on any operating system for the BBC.

The game itself is a version of the arcade game. You are driving a racing car which speeds around a track collecting dots. Also the computer is controlling a similar car, which is racing in the other direction, you must avoid colliding with this.

The keys used to control the car are:
Z left
X right
* up
? down

These are also described in the introduction.

Enterprise

Review

From an external point of view the computer appears squareish, a far cry from the skinny QL and Amstrad, with the keyboard taking up most of the room on the front of the case. To the right is the built in joystick that gives the case its 'melted' look, this feature is one that will interest the games player most as it obviates the need for a costly add on extra. The feel of this joystick is very good, considering its use, and the construction is adequate to last a while, although I don't think that I would use it on a long term basis and I don't know what you would do if you wanted to replace it.

On either side of the rear section of the computer is the expansion slot (sensibly covered with a slide off plastic cover), and the cartridge port. The cartridge slot is quite good quality, as well it must be able to stand up to all the use it will be getting as the Basic is supplied on cartridge. Nowadays no computer can afford to be released without a cartridge port.

The rear of the machine is covered with copious interfaces, most of them with non-standard connections. From right to left there is the power input, similar to a Spectrum's, the RF output, the monitor connection, a non-standard edge connector, the tape I/O system, one out, one in, and two remote controllers. The LAN/serial connector. Centronics printer port, and both joystick ports are also edge connectors and require special connections and leads. This is not very good. There is an in-

The graphics ability of the Enterprise has been much talked about. Intelligent Software has promised miracles with the graphics and sound. Mike Roberts takes a good hard look at the computer that has been later than the infamous QL.

dustry standard for joysticks, the nine pin 'D' type, hundreds of sticks are now closed to the Enterprise owner. The best thing about the BBC is that all its interfaces are standard — likewise the connectors. This tipifies the impression that the Enterprise gave me — but more of that later.

Keyboard Kapers

The keyboard is multi-coloured, with white on dark grey alpha-numeric keys, eight blue function keys, 12 green control keys, and a large red 'stop' button. There is also a red reset button at the rear that will reset the machine back to

Sound Advice

'Dave' is housed in a flat pack, a particularly efficient method of housing a chip. This type of chip was first developed by the military forces, as it is you could probably drive a tank across it. The sound generator has 22 registers, however only 16 of these registers are to do with sound generation. The rest are to control the main function of the chip — memory management and processor management. This single chip handles a lot of

Basic or the built in word processor or, with two presses into the self test mode of the operating system.

The feel of the keyboard is atrocious — truly bad. It is a long way above the Spectrum, but surprisingly similar to the dreadfulness of the Speccy + or the Quantum Lurch. It's not too bad for programming but writing this review on the built in word processor was a bit difficult.

Now onto the inbuilt hardware. Much has been made of the custom graphics and sound chips 'Nick' and 'Dave'. Both of these chips were meant to make everything else look like ancient relics. I shall start with the sound chip as this represents a bit disappointment but some surprises.

the Z80's upkeep functions such as memory decoding, interrupt handling, and I/O functions. This is very efficient use of hardware and enables the Enterprise to use access the huge amounts of memory that it can.

This means that the 64K of RAM advertised is a true amount, minus memory for the screen and system you get around 50K left — about the same as the Commodore Plus/4 that has a similar memory management system, but unlike the MSX computer which has only 28K left for use after starting off with the same or greater initial RAM size. This allows EXOS, the operating system, Basic, and the text editor/word processor all to reside on the address bus at the same time — yet take up no valuable memory space at all! It also allows you to access up to 4M RAM (apparently) as straight forwardly accessible memory.

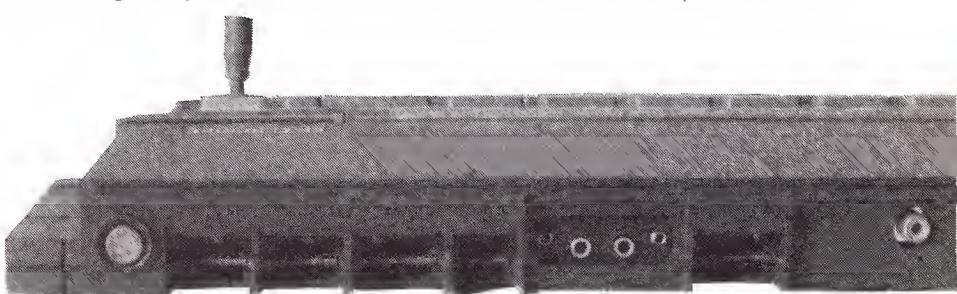

However impressive the memory management system of the computer is, this is not reflected in the sound output functions of the chip. The sound output is four channels of sound. Sound output is limited to a square wave, with programmable distortion with a simple filter and a certain amount of ring modulation. This is quite crude but the system comes into its own when you realise that there is TRUE stereo sound output through the (non-standard again) video output connector.

Ignoring the poor potential of the sound hardware for a minute, the software to drive it is excellent. Independent envelopes for left and right channels with differing styles (distortion) and the sound queueing is wonderful. I must make a point here that the sound is true stereo. The Amstrad has three sound channels. One can be the left channel, one the right, and the remaining one is fed to both. On the Enterprise all four channels go to each side with amplitude and envelope control independent, only pitch filtering, and modulation is global.

It is a pity that no synthesis is possible, as on the Commodore 64. The music demo is quite impressive, but the sound produced is very 'computery'. Another point to mention is the inbuilt sound output. It comes through a single Spectrum-like speaker mounted under the keyboard. This gives a very 'tinny' sound to the music, although, unlike the Spectrum, it can be very, very, loud. This is yet another example of the 'spoiled for hap'ath of tar' impression that the computer gives me.

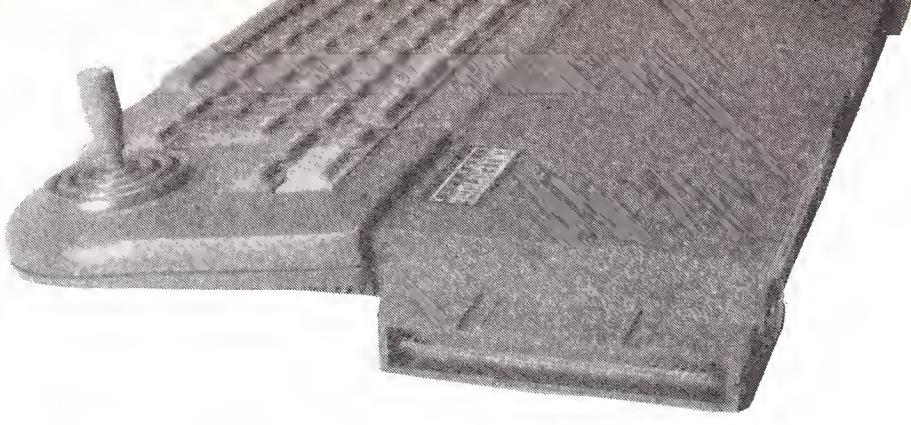

Graphic Details

'Nick', the graphics chip lives up to all my expectations. Disregarding sprites, it can do anything that any

other computer on the market can do — and a whole lot more. Programmers are going to have a lot of fun programming this beast here is a list of some of the functions:

The whole graphics screen is reprogrammable in any way, so that each different scan line can be a different mode if need be. There is 256 scan lines on the screen with interlace separately controlled for another 256. With careful programming it is possible to get a 672 horizontal graphics resolution with 512 vertical lines. There is a software driver on the demo tape to

Enterprise

Review

give 640 by 360 graphics 80x50 text and a number of text lines on the bottom of the screen and the status line at the top. The screen flickers a lot, and you need a very good monitor to see the characters (a TV set will just display a series of blobs), but it is possible. The catch comes when you type INFO to see how much memory is left. The answer — 6990 out of around 50000 to start with — such is the penalty of hires, as BBC users will testify.

Text can be displayed at up to 80 characters per line and 256 colours, each character may be user definable and be composed of 1 to 256 scan lines each.

Attribute mode gives a programmable resolution with two colours selected for each square — like a Spectrum — out of the 256 available.

The hi-res and lo-res graphic screens give a very BBC like 2, 4, or 16 colour palette selected from the 256

available, also if you are willing to accept a dreadful resolution, you can have the full 256 on the screen at the one time.

Sprites are not supported. This is more of a damnation of the video system than may at first be realised. For the game player and the game writer the absence of an ability to manipulate hi-res objects on the screen with very high speed. Very high resolution is all quite nice, but one of the main reasons why the Commodore 64 has knocked the Spectrum off the number one spot as the most popular machine. Also the Atari 800XL, the original design was finalised in 1979 — six years ago, has remained on the top partly due to its sprite graphics. The other reason that the screens look so good on the Atari is that each raster line is programmable — this gives infinite flexibility to the graphics displays — up until now only the C64 and Atari have this horizontally reprogrammable display — now the

Enterprise has the most impressive of them all — a pity about the sprites though.

The inbuilt software is EXOS, an excellent operating system that can handle almost anything, and a word processor. The word processor isn't up to the standard of most WP programs but what can you expect for a freebee?

It is more of a text editor than a true word processor. Entry to the processor is direct without Basic plugged in and by inputting 'TYPE' or function 8 from Basic. All of the functions are WYSIWYG with 80 or 40 columns selectable. Swapping from Basic to the WP destroys memory contents, as does switching display modes in the WP — which is a real shame. A very thoughtful feature is the label that goes over the function keys. Normally, it displays what the keys do from Basic. But once in the word processor you can turn it over and it gives you the WP functions.

The Basic is quite comprehensive. Full graphics handling is supported — except really advanced object handling or shape manipulation — such as software sprites or shape tables. There is an animation demo on the introductory tape, but animation on a large scale using their method may be impractical.

A unique function of this Basic is the ability to have more than one program in memory at any one time. Each program can have a name and control can be passed between them.

I have few complaints about the Basic, it performs its task admirably — though it seems to be going out of fashion to give the games programmer any special facilities.

To conclude. This is quite an excellent machine. I would, however, re-evaluate my opinions about the machine after a long enough period of use.

To most software houses having six different titles concurrently in the Top 20 is an achievement scarcely dreamed of. To Infocom this is a way of life!

When leading American distributor Softsell began publishing a fortnightly games software chart some of Infocom's titles, including the renowned ZORK, were already on the market. ZORK and an ever-increasing number of other Infocom evergreens immediately made permanent homes at the top of Softsell's and everyone else's charts.

Nearly two and a half years later nothing has changed — except that there are more Infocom titles at the top. ZORK et al are still selling as well as ever.

Infocom's unprecedented success is striking proof that creativity and professionalism still exist in the games arena. So what's their secret? Simple, they've stuck to what they're good at, which is text only adventure games of amazing depth and complexity. Couple this with some of the most innovative and outrageous packaging ever seen in a computer shop, slap a \$50 price tag on the end and there you have it!

There have been two reasons why Infocom's American success has not been repeated in the U.K. Firstly, all their titles are disk based and secondly, historically, there has been a huge gap between price points in the UK and the US. But, with the gradual increase in the U.K.'s disk population, Commodore — to their eternal credit — decided to buy the rights to six of Infocom's early titles. These are ZORK I, II & III, STARCROSS, SUSPENDED and DEADLINE. The UK packaging is decidedly more modest but then so is the price, which at £11.95 represents fantastic value for money — provided you've got a disk drive.

DEADLINE is a perfect example of Infocom's interactive fiction, as they call it, and was the first of their Interlogic adventures. Written in 1982, DEADLINE is a 'who dunnit' adventure of the highest calibre.

The Plot

Mr. Marshall Robner, the industrialist and philanthropist was found dead yesterday morning in the library of his home. Apparently the suicide victim of an overdoes of the drug Ebullion, Robner was only discovered after the library door, locked from the inside, had been broken down with axes.

Three days earlier Robner had telephoned his solicitor, Warren Coates, to inform him of his decision to alter his will. Given the size of the estate, Coates has asked the chief of detectives (played by you) to quash any suspicions, which are inevitable in these circumstances. Mrs. Robner has reluctantly consented to allow you to spend one day (12 hours) in her house to confirm, or otherwise, the general consensus of opinion that Marshall Robner died of a self-administered overdose of Ebullion.

Better than Sherlock?

Melbourne House's Sherlock was a good detective adventure but DEADLINE leaves it standing in almost every department. Being disk based, data can continually be accessed from a large data base. Consequently, the

location descriptions in DEADLINE are often well over a screen in length and paint a rich and vivid picture which adds to the authenticity of the game. Take, for example, ONLY AN EXCERPT from the description of the library:

"A pencil is lying on the floor near the desk.

Beside the desk is a large collapsible tray.

Sitting on the tray is a bowl containing a white powdery substance.

Alongside the desk is a wicker wastepaper basket.

The wastepaper basket contains:

a bunch of crumpled papers.

Lying on the floor, overturned, is a beautiful saucer.

Turned onto its side, lying on the floor, is a beautiful teacup.

Lying atop the desk is a pad of white note paper.

A desk calender is here, open to July 7th.

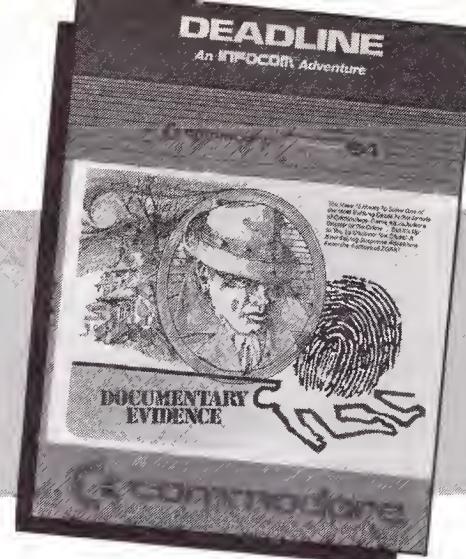

There is a bottle of Ebullion here".

This is where the body was found after supposedly drinking his late night cocoa and taking a handful of Ebullion. More about the pencil and note pad later.

Text Interaction

As with all Infocom adventures DEADLINE accepts complete and complicated sentences drawn from a very large vocabulary of "understood" words. Not only can you examine an object but you can also examine under, behind and near something as well.

You will meet a number of

the phone rings she will make her way to one of the rooms in the house with a phone. If you follow her, she can be seen whispering something into the receiver and hurriedly replacing it. Such is the interactivity of DEADLINE that you can restart, go up to the library (which also has a phone) and wait until the phone rings. Again Mrs. Robner answers the phone but this time you can listen in!

Some Hints

1. Always ask each character what they think of all the others.
2. The gardener may get very angry when he finds foot prints in the garden. Ask him to show them to you — there are vital clues in

INDEPTH REVIEW

characters during the course of your investigations, some of which may have vital information which you must coax out of them. Shouting at people from a distance is strongly discouraged as it is considered rude and may make them less helpful. Once you and another person are in the same place you can ask questions or ask that person to do something for you. For example:

'Mrs. Jones, tell me about Mr. Jones'

and

'Fred, show me the bullet'

are both acceptable sentences. In building up a picture of the characters and their relationships with each other it is illuminating, to say the least, to see what they all think of each other — bitch, bitch! Objects can also be shown to people in order to see if they illicit any response, such as raised eyebrows etc.

Being In The Right Place At The Right Time

Mrs. Robner receives a phone call just after nine o'clock in the morning. When

3. amongst the roses.
4. Count the crockery! In the library, amongst other things, are a note pad and pencil. Type in "Shade note pad with pencil". This reveals impressions left by writing on the previous sheets. Only a few letters show up but it should be possible to put together the contents of the whole letter. Our version is as follows:

Baxter,

For the last time I must insist on your stopping a merger with Onmidyne Corporation otherwise I will be forced to documents in my possession which are replicas of your Focus s.....

Please reconsider before it's too late, Marshal

All in all DEADLINE is one of the most engrossing adventures I have ever played and one in which you genuinely feel that you have adopted the role of a Chief of Police trying to solve a case. If you have a Commodore 64 disk drive and you like having your mind stretched then this is for you.

67

87

Blackjack uses various Atari features: Player Missile Graphics (for the title screen), Antic modes 4 and 5 (for the cards and coloured letters/symbols) and Vertical Blank interrupts (this is the music in the initializing process, "STAR WARS").

I have written Blackjack on the Pet, BBC and Apple (I also had a go at the Spectrum, but uncle Clive must have been having a bad day when he was inventing the BASIC!!); Unfortunately I can't offer any tips on translating, as each program is completely different. I am 15, and go to Beacon School. As you might notice, the program is dedicated to Harriet Ainley who gave me moral support.

ADVENTURE into PROGRAMMING

Over the last few months, we have looked at the main problems you're likely to come across when trying to write an adventure game. In this final article, I want to look at some of the 'extras' which you can add to your game to turn it into a truly professional piece of work.

One of the most important aspects of an adventure which can spoil an otherwise excellent game is screen presentation. It's important to ensure that there are no spelling mistakes and that words are not split on the screen. I'd also advise you to make full use of colour and sound in order to make the game look good.

Many people are put off typing an adventure game written in BASIC into their computer because it is usually possible to solve it just by looking at the listing. There are two approaches which can be adopted to solve this. You could make the program unlistable by POKING a clear screen command into a REM statement at the start of the program.

Listing one illustrates how to do this on the Beeb, but a similar technique is possible on most machines if you know where you are poking!

Listing 1

```
10 REM * * (C) Fred Bloggs * *
```

If you make this the first statement of your program and then type ?(PAGE + 7) = &15 and press RETURN, it will POKE the clear screen command into the 7th byte of your program which is in a REM statement. Your program will then RUN, but you will be unable to list it!

This technique is only of use if you intend to sell your program on tape and any player who knows what they are doing can crack this one!

An alternative method of making it difficult for a player to cheat and solve the game by listing it is to shift the contents of your DATA lines along the ASCII code. Supposing location 15 is given a description in line 1000

```
1000 DATA in a tiny wooden hut.  
There is a large dog asleep in one corner.
```

Shifting this by one in the alphabet would produce:

```
1000 DATA jo!blujoz!xppefp!livu!Uijsf!  
!jt!b!mbshf!eph!btmffql!jo!pof!dpsof/
```

This is enough to deter even the

most ardent cheater, but does require great patience when writing it. It also needs to be converted back to normal text. If this description is held as element 15 of the array A\$, it can be converted back to normal with the following routine:

```
2000 FOR X = 1 TO LEN(A$(15)  
2010 B$ = B$ + CHR$(ASC(MID$(  
(A$(15),X,1) - 1))  
2020 NEXT X
```

This of course looks at the ASCII code for each letter in the string, subtracts one from it and adds it to B\$. One unfortunate effect of using this sort of technique is that it will slow the game down considerably, especially if the descriptions are very lengthy. If you have ever tried to list your favourite game, you will probably find that it has been written in machine code, which allows the speed of the program to be increased as well as taking up less memory, especially if data compression techniques are used.

Most new adventures arriving on the market now contain graphics, unless written for a machine in which memory is at a premium. Personally, I've always preferred the totally text adventure because the mind can create a much more vivid image than any computer graphics, especially if the text is as detailed as the 'Level 9' adventures. However, many people would disagree with me on this and it's almost inevitable that you will want to try to add graphics to one of your games at some

stage. There are many ways of achieving this and it would be pointless in an article like this to try to explain in detail how this is done, as it will depend upon the graphics facilities available in your machine.

However, in principle, all that is needed is a simple routine in the main program loop such as

```
122 ON P% GOSUB 1000,2000,  
3000,4000
```

Assuming that you have used the variable P% to hold the number of the location you are in at the moment. This would have the effect of passing control of the program to the subroutine 1000 if you are in location 1, subroutine 2000 if you are in location 2 etc. Each subroutine could hold the graphics for the location. One disadvantage of doing this in BASIC is that the commands will use a vast amount of memory, especially on the Beeb and in addition will slow the program down.

A far better solution, if you have discs or microdrives is to store a screen picture of each location as a file on disc and load it in from disc each time you visit a new location. This does in fact make a great deal of sense, as you can draw your graphics using one of the excellent 'Artist' programs around and this will save time and allow much more complex pictures to be built up. So far, few commercial programs have made use of this 'graphics overlay' technique because the program is intended to be sold on tape, but as disc drives become cheaper and more widely available, we are likely to see many more programs using this method of producing graphics.

If you can remember back as far as the first article in the series, you will recall that I set the plot for an adventure based upon the antics of Cedric the toothless vampire and you may have wondered what has become of poor Cedric in his quest to recover his teeth so that he might feed again.

This adventure, which was written on the Beeb but using only statements which are common to the majority of machines. There will also be a list of modifications for Commodore 64, Spectrum, Oric, and Amstrad.

Of course a game deliberately to be compatible with a large number of machines cannot be as sophisticated as a machine specific game, but it should prove to be quite a challenge to solve!

Specific Machines

BBC/ELECTRON

The program was written in MODE 7 on the BBC micro and the CHR\$ command is used to introduce colour. Electron users should use MODE 6 and could change the colour of the screen with VDU 19,0,1,0,0,0.

AMSTRAD CPC464

1. Remove all reference to CHR\$ and replace with PEN commands to select colours.
2. Add line 25 MODE 1 and select your choice of colours using INK.

MSX machines

1. Remove all reference to CHR\$ commands which are only used to change the colour.
2. Add line 25

25 SCREEN 0: COLOR 1,15: KEY OFF: WIDTH 40

ORIC

1. DATA lines will be too long to type in as one line. These can be split into several different lines and the descriptions of locations shortened.
2. Other long lines which begin with IF will need to be split into several lines all beginning with the same IF condition.
3. Add line 25

25 TEXT: PEN 7:PAPER 0: GRAB

using pen and paper commands to suit yourself.

4. Insert a garbage collection line:

265 F=FRE("")")

no other changes will be necessary as the CHR\$ commands select colour in a similar way to the BBC.

SPECTRUM

1. The CHR\$ commands should be replaced with PEN to select colour.
2. All string handling will need to be replaced with SPECTRUM equivalents. This has been discussed in the previous articles and would take up too much space to describe here. However:

- B\$=Z\$(1 TO 2) is equivalent to B\$=LEFT\$(Z\$,2)
- B\$=Z\$(2 TO 4) is equivalent to B\$=MID\$(Z\$,2,2)

```

BrainWare

TOWER OF DESPAIR

Runs on: Spectrum 48 K
Made by: Games Workshop
Price: £8.95

The game comes in a package with a separate book of instructions this covers everything from how to play the game to background. This is quite comprehensive and you should have no problems if you read the book carefully. It also uses quite a new idea, in the booklet you will find the games picture. Instead of drawing the pictures on screen the game tells you to refer to a page number in the booklet. Surprisingly this works quite well.

The game loads without haste although you have to rewind after every game because the second part is loaded on the other side of the tape this has its advantages eg. If you complete the first part then die you don't have to go right through the game again. It also has its disadvantages eg. You have to rewind the tape every new game. The picture referring worked very well as these contain vital clues to the game. You start off in your own castle when a message comes through on the crying sphere. You then must go on a quest to go and find Malnor and destroy him. This is quite a complicated plot and gets worse as the game goes on (or so the ranger says). After leaving the castle you are immediately attacked by three demons from the sky (cowardice prevails this time). After solving that problem you have a choice North to the farmland or south to the woods. There were parts of the game where movement was totally illogical but on the whole this didn't occur.

The game played smoothly and the picture reference worked very well. The game proved to be as good an adventure as any I've seen. I thoroughly enjoyed the game. The plot and history were good and with some thought put into them.

KALAH

Runs on: Commodore 64
Made by: Talent Computer Systems
Price: £7.95

Kalah is an ancient board game that requires two players. The rules are easy to pick up, but playing the game is anything from easy. The board used is of a simple design as in the early days, it is claimed, the game was played in roughly marked pits hollowed out in the sand.

The playing area of the board therefore has the appearance of a rectangular box made up of two lines of 6 shallow pits with a larger pit at both ends called the 'kalahs'.

At the start of the game each of the 12 pits (but not the larger kalahs) is filled with the same number of pebbles or stones. Say two stones for example, in each of the 12 pits. The stones/objects in the pits are neutral as they do not belong to any particular player. Each player controls the line of pits on his side of the board, and owns the kalah on his right. Now to the game itself.

The object of the game is to collect more than half of the stones in your own kalah (that is the larger pit to the right of the board), by moving the stones in your pits in an anti-clockwise fashion around the rectangular rows of pits. There are three simple rules that govern the way in which the stones are moved.

The instructions provided are very clear and provide simple diagrams showing the typical moves that could be made. The game has a demonstration mode where a series of games are played automatically. There are 9 levels of skill which dictate the speed and the 'intelligence' of the program's moves. You can select the number of stones to have in each pit (3-6), whether you want the first move or whether music is played during the computer's move. Some of the features include a clock for each player, an information screen, lookahead, replay last move, swap sides and quit.

reason may prove popular, especially around Christmas time. Each player inputs his/her name at the start and then the game begins. When a particular player's turn comes around a car is displayed with the player's name on the side. The car stays still on the screen while the various buildings move past in the background. When the car stops the screen changes to the player's particulars (money, property etc.) and if the property the player is on has not been bought, the player is given the option. If the property is unsold the player is given the option. Other establishments on the 'board' include shops and markets. At the trade markets you can buy or sell shares, land or gold. The winner is the last person left who isn't bankrupt.

Tycoon is a good game if you want to play a 'monopoly' type game but for me these games are best left to the board.

HOUSE OF USHER

Runs on: Commodore 64
Made by: Anirog
Price: £7.95

This game can best be described as a compendium of games put together as an arcade adventure.

On entering the house, at the start of the game, the player finds himself in a reception hall, referred to as Room one, which gives access to the other nine rooms each represented by a numbered door. Behind each door is a different arcade adventure. The player controls the character's movements by using a joystick.

Each game gives the player three chances to find the secret of the House of Usher and thereby leave. To enter a room from the main reception hall the character must stand in the doorway whilst the joystick is pushed forward and the fire button pressed. It should be noted that the door used to enter a specific room cannot be used to leave as the room entered must be successfully negotiated before the player is permitted to leave and therefore enter another room.

Once all nine rooms have been entered the player is then permitted to enter the final two rooms X and Y (the final room).

This compilation of games can best be compared to that of Nightmare Park where similarly a series of simple tasks had to be completed before the player was returned to the main playing area to choose another path for yet another challenge. Though it should be said that graphics and sound effects provided by the House of Usher are far superior and provide a greater degree of entertainment.

TYCOON

Runs on: BBC B
Made by: Warlock Software
Price: £5.95

Tycoon is best described as the computer version of monopoly. The game is for one to nine players and for this

BrainWare

For Thinking
Players

THE ORACLE'S CAVE

Runs on: Commodore 64
Made by: Dorcas Software
Price: £6.95

The Oracle's Cave is an exciting adventure game that uses part of the screen to display high resolution, animated graphics whilst the rest is used to display text and thereby prompt the adventurer for instructions.

In the game you are the adventurer trapped in the entrance to the Oracle's cave maze. The only exit is through the Oracle's own cave on level four. There is a map that draws the caves as you enter them showing the interconnections between the ones you have just left.

To escape and win the game you must fight fierce monsters (all graphically displayed on the screen with striking realism), collect the treasure (thereby increasing the score), carry out a quest and finally if the character has enough strength, defeat the Oracle and end the adventure.

To prevent the game from going on forever the adventurer has only five 'days' in which to complete the quest. The passage of time is displayed as either morning, afternoon, evening for each of the five days.

Throughout the game the Oracle asks you questions and gives you a choice of responses, for which only a single character reply is required. All the valid responses are shown on the status line at the bottom of the screen. The character's movements through the caves is graphically shown as are the fights with monsters. The game is played in real-time so that even whilst considering a move causes the passing of time.

Scattered in the caves are various articles that help the character as well as various weapons and the inevitable treasures. But these can only be obtained if the residing monster has been overwhelmed by having a greater degree of combat strength.

The game has been well designed and the graphics animation is realistic, but I feel that the only drawback is that only five days are given to complete the adventure.

REVERSI

Runs on: Memotech MTX series
Made by: Continental Software
Price: £8.95

Reversi was invented in 1888 and is thus coming up for its centenary. It is one of those well tested simple logic board games which turn out to be not so simple when you play them. The game starts with 4 counters on the mid-

dle square of an 8 x 8 chess board. Two are black and white. You decide which colour you wish to be — black starts and is supposedly easier. The object of the game is to enclose your opponent's pieces between two of yours either diagonally, horizontally or vertically, in which case they change their colour to yours. The game progresses by alternate moves until neither player can go or until all the squares are filled. In either case the winner is the one who has the most pieces of his colour on the board at the end of the game. If a player can't go he forfeits a turn.

On loading the program you are presented with a menu of options. Firstly, you can select instructions which are clearly stated, or go to the games proper. If you select instructions, you are able to alter the board to one of 6 colour combinations, ask for a hint on play, or quit the game. You can select from four levels of play, which get progressively more difficult. Consequently, the computer takes longer to work out its moves for each successive level. Your score is indicated by a white arrow on screen alongside the colour you choose to be for that game. If you select the highest level of play, the computer asks you to wait for its response and a bar code timer clocks up at the bottom of the screen to indicate that the computer is working. The hint option is useful because it allows you to seek advice from the computer. When it has finished deliberating what you should do it puts an 'H' on screen at the position it recommends you go next.

The game is a good old favourite and well presented in this version. There's no need for sound and the graphics are simple and well ordered, with keyboard or joystick control of moves. However, you need to use skill, judgement and logic to play the game to the full. Good value for money.

LINGO

Runs on: BBC
Made by: Complete
microcomputer
services
Price: £9.95

This program is described as 'the game that makes fun of the English language' but of course a knowledge of the same is essential thereby restricting the 'fun' aspect to those aged eight and over.

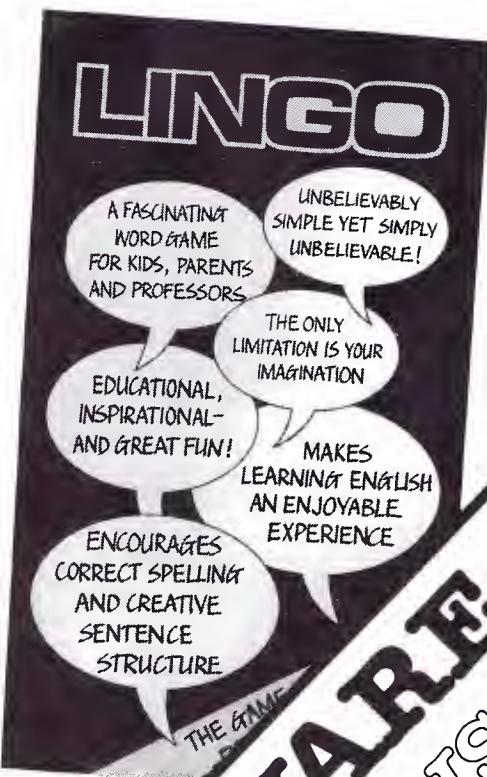

The program is very well presented arriving in a video style box with an elegant instruction booklet which clearly guides you through the complexities of the game. No problems were encountered with loading though being of classic adventure length patience will be a great asset not only for the playing of the game.

Within the computer's memory are

placed in excess of seven hundred words from which each of up to four participating players are dealt a random sample of twelve. Using simple key strokes the words are orientated such that the players make fullest use of the score values for each whilst making a sentence both meaningful and grammatically correct. These two qualifications can be challenged by the other players upon whose satisfaction a cumulative score is maintained.

Great thought has been obviously given to both the educability and playability of this game to the extent that a constant table of suitable word endings, punctuation and link words are displayed from which selection can also be made and score enhanced accordingly.

This is not the kind of programme that can be enjoyed, nor a satisfactory conclusion be reached, in five minutes and is so totally different to the 'shoot, bang, kill' type game; but spend the time and give it some thought and an extremely rewarding, often hilarious, experience can be had by all the family.

S

Lou and Les have finally gone round the bend — or so it seems — there is a distinctly circular flavour to this month's offerings.

1 ROUND HEADS

One of Lou and Les's great contributions to society during 1985 will be several suggestions for things you can do with those brass one pound bits we all love so much.

Try this one:
Get four of them.
Can you place all four so that each touches all of the others? Simple eh? But can you do the same with five?

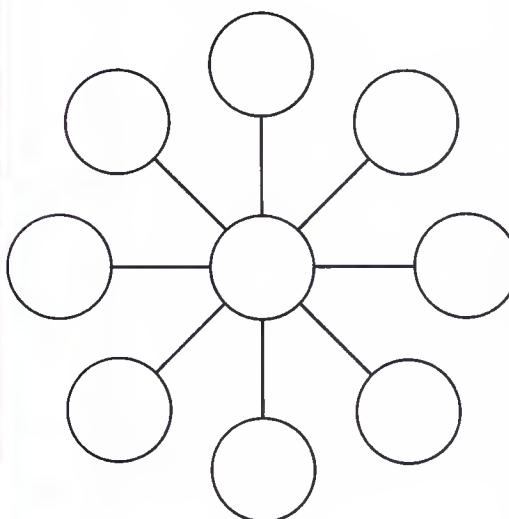

2 GOING ROUND IN CIRCLES

Do you have three seconds to spare? OK then, write down the number eleven thousand eleven hundred and eleven. (In figures please — anyone can copy.)

3 ROUND SHOULDERS

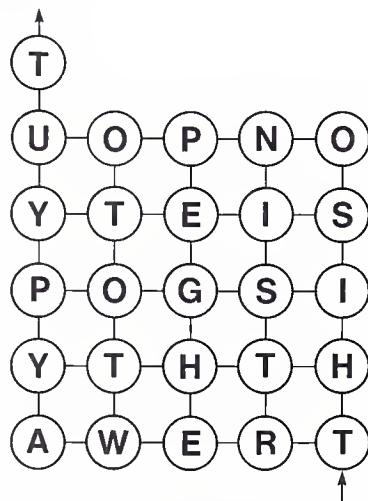

In Falkovia the bingo sessions are much favoured by the peasant classes. Each card looks like this:

and the only numbers used are 1, 2, 3, 4, 5, 6, 7, 8, and 9. As you can imagine sessions are rather short, but odd rules apply. As each number is called, you put it in any circle. To win, you have to end up with the numbers arranged so each straight line passing through 3 circles adds up to 15. Eyes down!

4 ROUND ROBIN

Start at the bottom right hand corner — and finish up at the top left. In between, you can trace a path, following the connections, and come out at the other end having spelt a message that makes sense? Do not step anywhere more than once. Do not nod off till you have escaped.

5 NIGHTS OF THE ROUND TABLE

Somebody is pushing a car past a hotel towards a jail. What is going on?

6 BREAD ROLLS

Notice the distinct signs of panic looking for circular titles. Can you think of any better — these are a mixed bag, plucked from Christmas crackers and the ravings of lunatics. . . . Which is the odd one out?:

25 40 50 60 100 150

ABPBBGYRRRRRRRRRRRRRR

Tomato Carrot Apple Plum

1.00	5.45	6.00	6.15	7.00	9.00
10.00					

7 ROUNDWORMS

629433
4374
29948677
10648209
47916
473715

Not a particularly fascinating list of numbers is it? All we want you to do is, without the use of a computer, calculator or pencil, tell us which of the above numbers is exactly divisible by 9.

OK, and which of them can be divided exactly by 11?

8 ROUNDABOUTS

What lacking here?

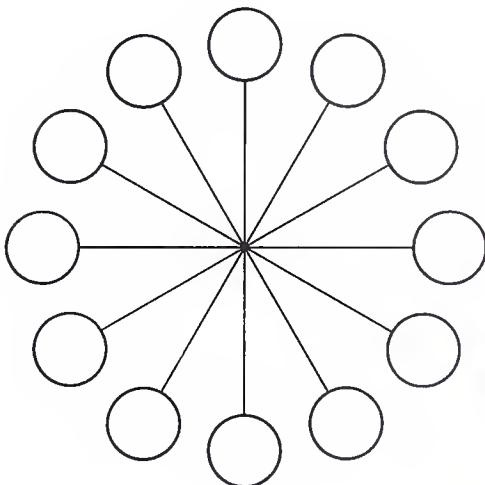

SQUZ VRGRN POLP
AENDAN ESAMEN AERS

PUZZLES

9 ROUND THE CLOCK

Students of Industrial Relations seeking odd work practices need look no further, of course, than Falkovia. Traditions and rituals, idleness and ignorance, low pay, long hours and of course torture are all part of the normal round.

Membership of a trades union was punishable the usual lingering death for first offenders, but this never worried the Clark brothers — they were self employed, running a pet shop that stocked the usual Falkovian furry friends — piranha, rabid dogs, scorpions and the like. The three brothers, Cyril, Howie and Keith had just one rule between them — looking at the clock below, they had to divide the hours up so that no one ever worked when two hours could be joined by one straight line. Was it worth their effort? Did they ever manage it?

10 HAPPY ENDINGS

All the "coloured" clues are of a kind.

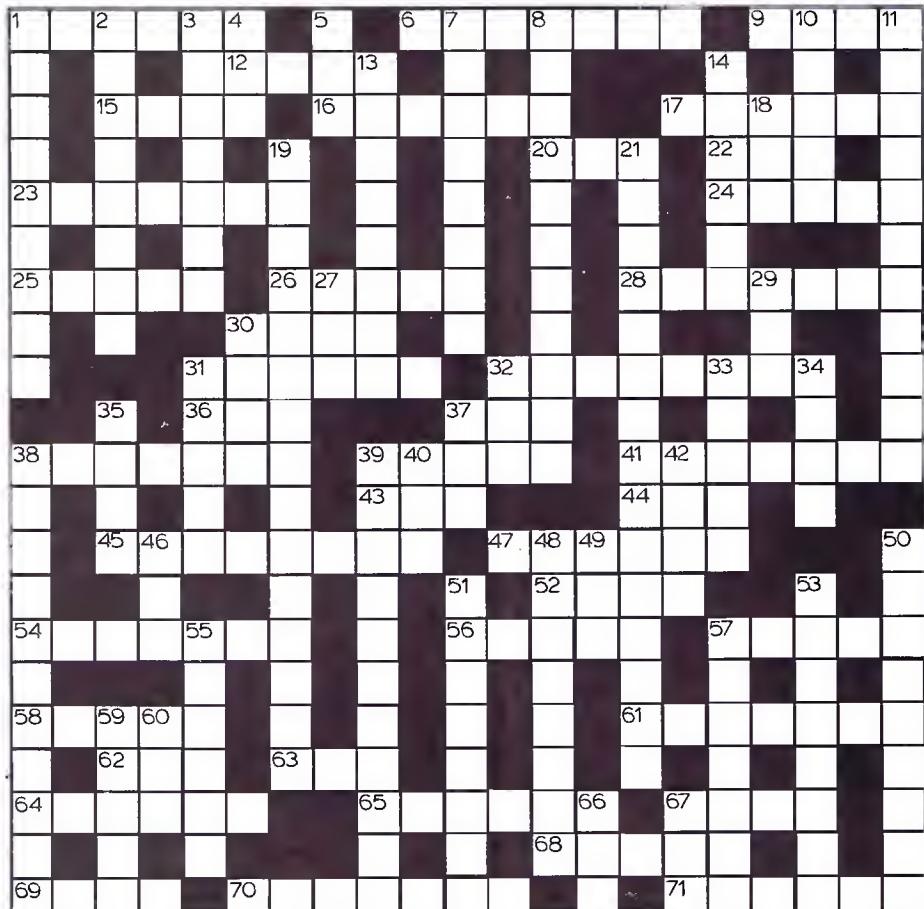

Clues Down

- 1 A green one (9)
- 2 See 14
- 3 A black one (7)
- 4 Sherry served during Prohibition? (3)
- 5 Animal featured in the Classics (3)
- 7 A green one (8)
- 8 A red one (4,7)
- 10 A thousand in one toilet? What a house! (5)
- 11 A dark blue one (11)
- 13 A silver one (8)
- 14,2 A red one, and a green one (6,8)
- 18 Man who almost makes a loan (3)
- 19 A dark blue one (8,7)
- 21 A brown one (7,8)
- 27 Ever been... owned? (3)
- 29 Container for Greek wages? (3)
- 30 A fishy kind of finish (4)
- 31 Short science using 28 (5)

- 32 The infection passed quickly, I hear (3)
- 33 Gold turns to gin? (5)
- 34 Distinguished colour? (4)
- 35,47 A black one (4,6)
- 37 Positive feature of 31 (3)
- 38 A light blue one (with half of 19) (11)
- 39,55 A brown one (9,3,6)

- 67,68 man turns to dust.
- 68 Can't quite stomach one so aggressively virile (5)
- 69 All this dulls Jack (4)
- 70 Ole! 67 makes the most noise (7)
- 71 Last organ to love (6)

The story so far...

While exploring an ancient castle somewhere in North Africa I found some old manuscripts and diaries telling of ancient times when wars were waged constantly and fear held the heart of every person. They tell of a vast network of rooms and passage ways dug into the rock beneath the castle and, used by the people of the land for refuge in time of war and, as a last point of defence for the army who rules the castle. The treasury in this citadel was full of gold coins and jewels. I have decided to find the citadel, and the treasure if it still exists. However, I need your help and thus with my life in your hands I will begin my quest from the main hall. The rest is up to you.....

The Game

This program is a classic style text adventure for the 16K expanded VIC-20. You take the role of the adventurers character and guide him/her through various problems in order to survive and escape. Control is by standard two-word commands eg BREAK BOTTLE or DRINK SOUP, except in the case of directions which need only one letter ie N,S,E or W. No more than five objects can be carried at one time and INVENTORY will give a list of what is being carried. LOOK will give description of where you are located.

It is hard to die in this adventure so don't be afraid to try actions. If you wish to finish a game and continue later, type QUIT and follow instructions, or simply SAVE GAME. This will save your position on cassette when you want to continue type LOAD GAME and follow instructions.

There are 40 locations or places to explore and 22 verbs to use. Here are some of them:

GO, GET, LOOK, INVENTORY, LOAD, SAVE, OPEN, CLOSE, QUIT, DROP, HELP, DIG, EXAMINE.

There are more and you will have to

find them yourself. You don't want it too easy do you?

Hints . . .

Remember everything has a use.

Discard used objects.

Dropped objects which are fragile might break.

Make a map of the adventure.
BE LOGICAL.

RUNDOWN

Lines	Action
2-5	set up some variables.
10	set up instructions and data.
15	set PD\$.
200-250	check for movement and identify verb used.
270	GO routine.
300	GET routine.
390	check and break input into verb and noun.
500-1908	other verb routines.
2000	more variables and data.
2800-2826	SAVE routine.
2900-2926	LOAD routine.
5000	check movement and set up display.
5150-5155	'fall through floor' routine.
5175-5195	check and alter objects after action.
7000-7140	check for too long input.
8000	opening screen display.
10000	opening instructions.
12000-12004	press 'space' routine.

Conversion Clues

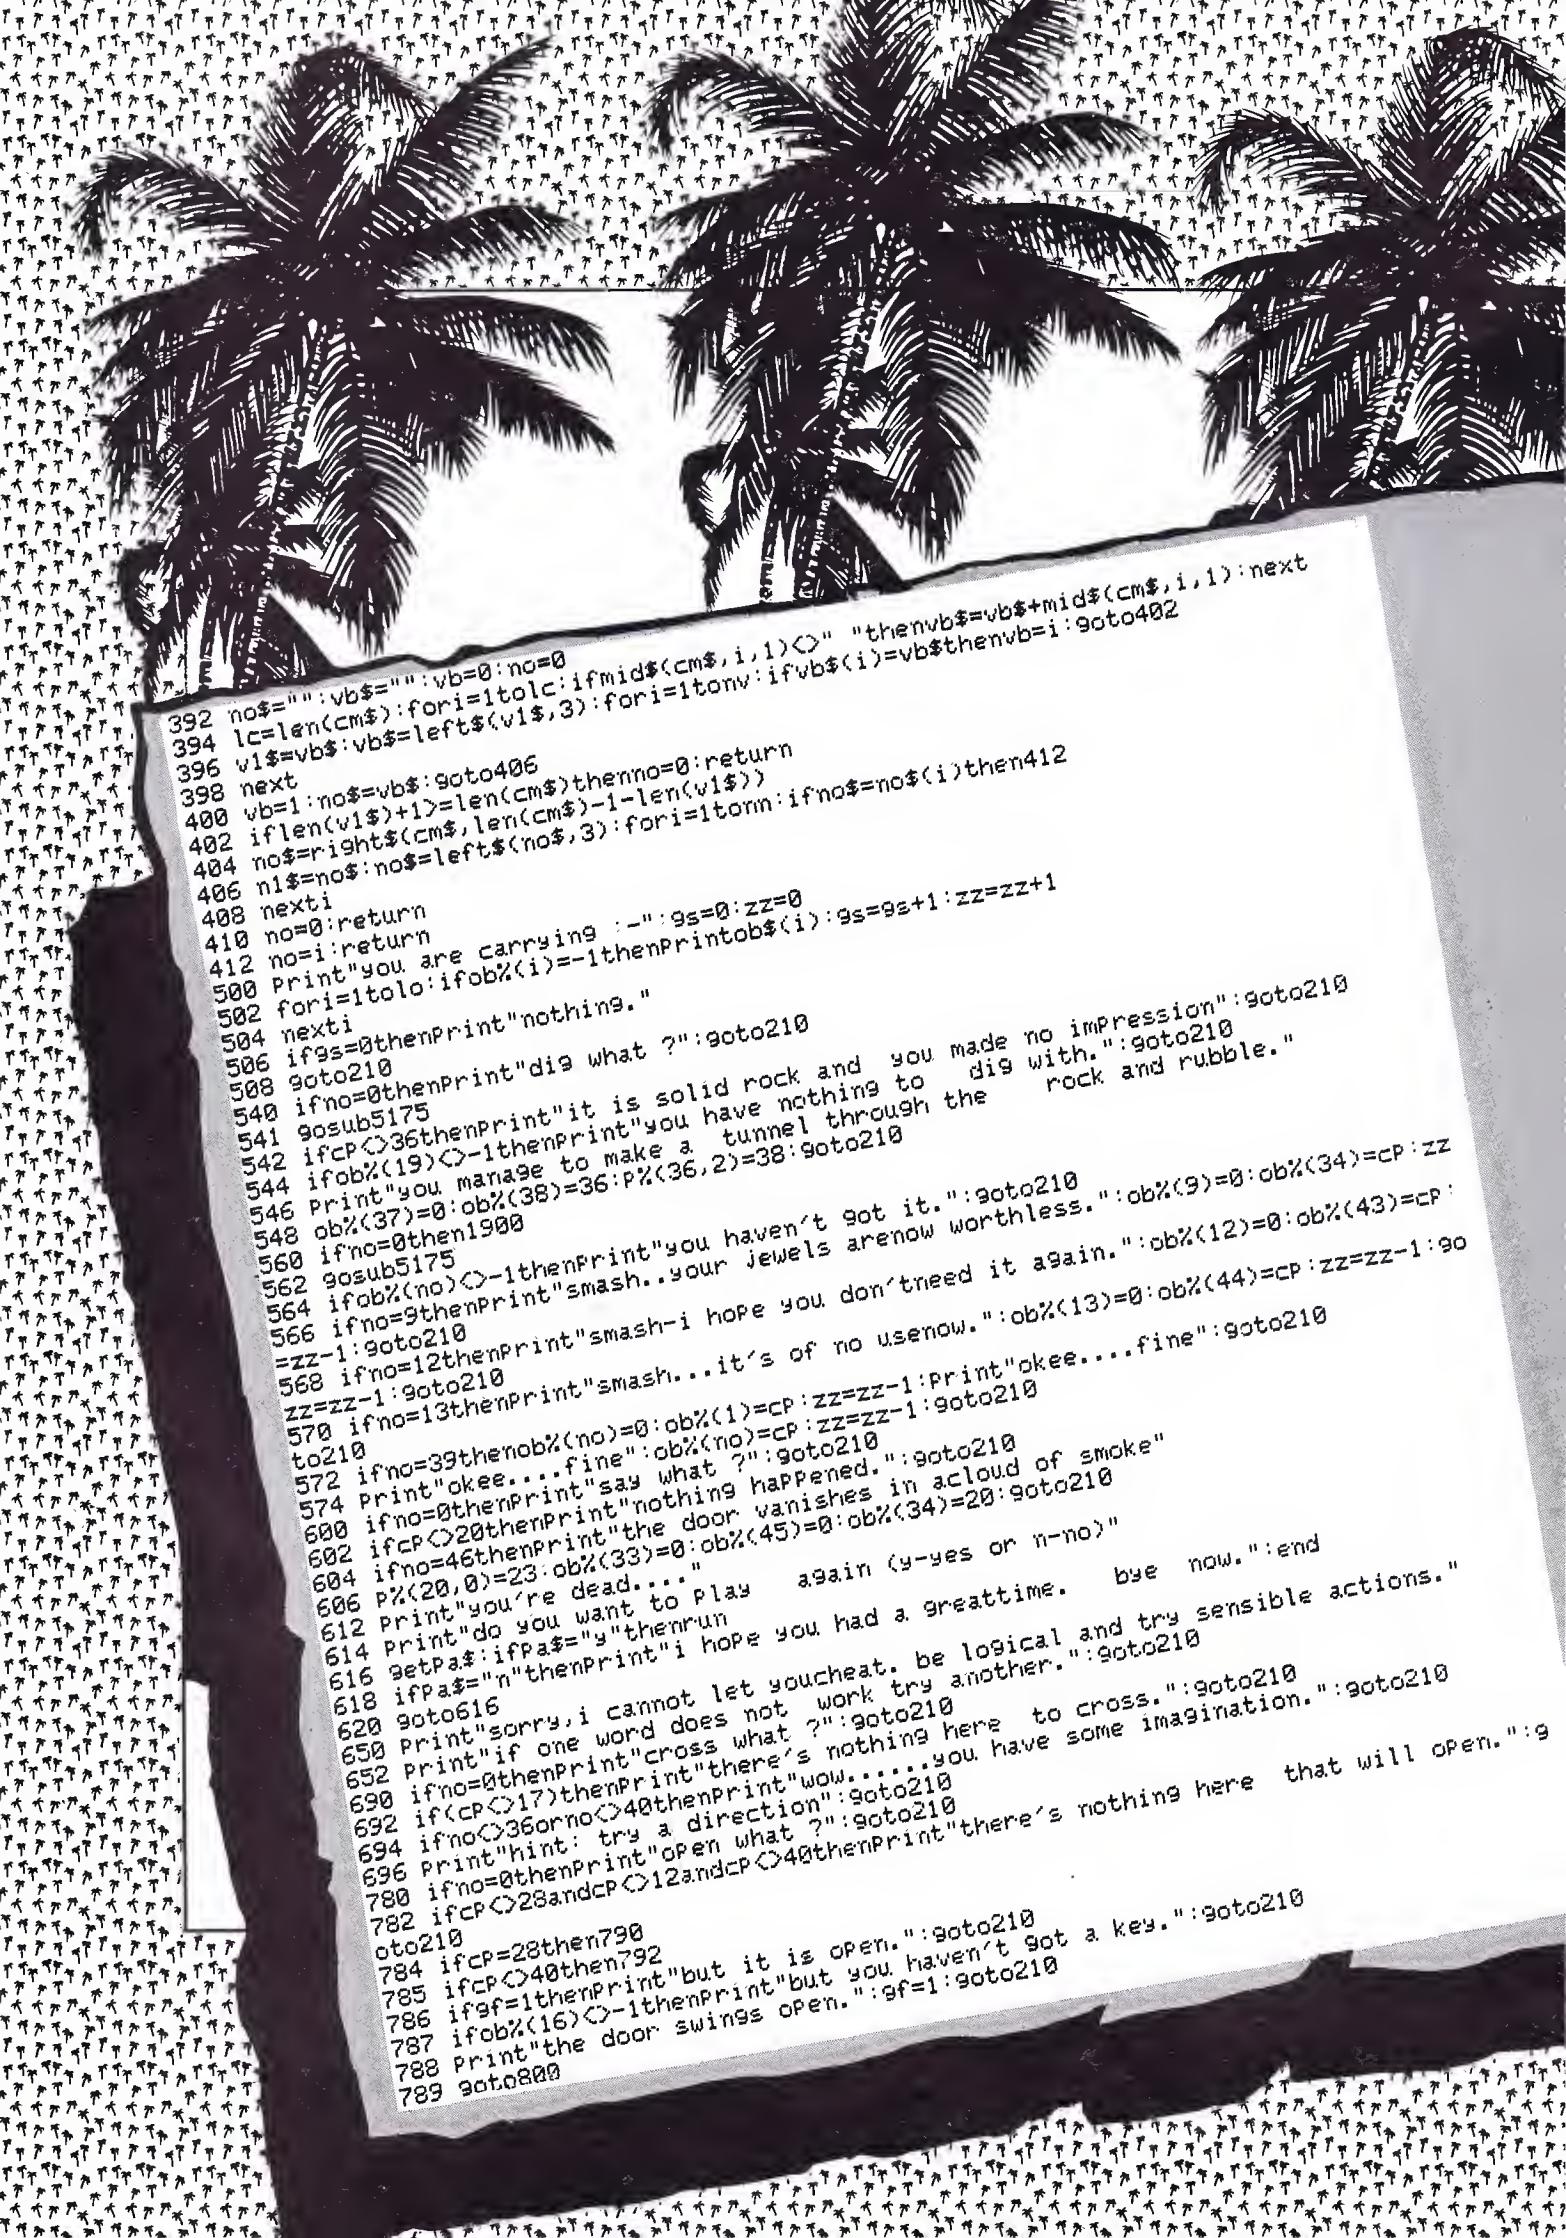

The adventure is written in standard BASIC. However, POKE 36879,25 which sets border and screen colour to white, has to be changed.

The opening screen display can easily be adapted for screens with a larger number of columns.

Rollergoal, which runs in Extended BASIC on the TI-99/4a, is a one-player game loosely based on the film Rollerball.

Your player must catch the ball fired from the gun and manoeuvre his way past opposing players until he is in a position to shoot for the goal, at bottom left of the screen. The opposing players are harmless until you player catches the ball, whereupon they turn nasty and do their best to wipe him out, by the simple expedient of flattening him.

As the game progresses they increase in speed and numbers until manoeuvring your player between them becomes a very dangerous business.

Although your player can only move horizontally and vertically under key control he can move diagonally by simply bouncing off the upper and lower walls.

The opposition score a point each time they wipe out your player and you score a point for each successful goal shot. The first side to score ten points is the winner.

RUNDOWN

Lines	Action
180	Clear and colour screen, set sprite magnification. Sub-program CALLS, set variables.
190-220	Set player in motion and check coincidences of sprites.
230-260	Move player to catch ball.
270-360	Move player and shoot for goal.
370-490	End of game (win or lose).
500-630	Sub-program to set graphics and colours.
640-750	Sub-program to display optional instructions.
760-900	Sub-program to set up screen and set sprites in motion.
910-1090	Sub-program to catch ball.
1100-1130	Sub-program to wipe out player.
1140-1190	

RUNS ON SPECTRUM

1200-1310 Sub-program to throw ball and check for goal scored.

Variables Used

SP	Speed of opposing player.
CT	Level of game.
SCH	Points for player.
SCA	Points against player.

Conversion Clues

TI Extended BASIC is fairly individual and does not lend itself readily for conversion to other dialects of BASIC as sprite graphics and user-written sub-programs are used.

The handling of sprite graphics is quite straightforward and the purpose of the various statements can be deduced from the listing. Here are some details of sprite sub-programs used in the program.

CALL SPRITE (Sprite number, character code, colour code,

CALL MOTION (Sprite number, row velocity, column velocity)
CALL COINC (ALL, H) Detects a collision between any two sprites and sets the variable (H) to -1.

The user-written sub-programs, prefixed by CALL, could be replaced by GOSUBs, using RETURN instead of SUBEXIT or SUBEND to jump back to the main program.

You are trapped in a room, which has platforms that are connected by moving girders. On the far side of the room is a timebomb which is set to explode after 1 1/2 minutes. You must travel across the platforms and girders, pick up the timebomb and then return to the start at the left of the screen. You will then move on to another room.

You are moved by Z-left M-right.

RUNdowm

Line	Action
5	Lowers RAM top, clears memory.
7-11	Prints message.
12-13	Data for positions of platforms.
15	Change character pointer from ROM to RAM.
20-32	Set up user defined graphics.
40-45	Set up main variables.
46-55	Set up screen.
60-65	Set initial positions of moving girders.
70-71	Put man on screen.
75	Clear keyboard buffer.
76-110	Move man.
150-220	Move girders.
500	Check if player has reached the bomb.
510	Check if player has reached star and got bomb.
516-518	Make player fall.
519-530	Explosion.
600-620	Collect bomb.
700-750	End of game, 'NEW GAME?'

Girders

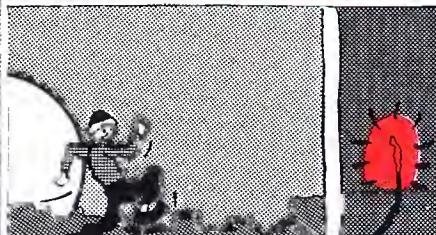

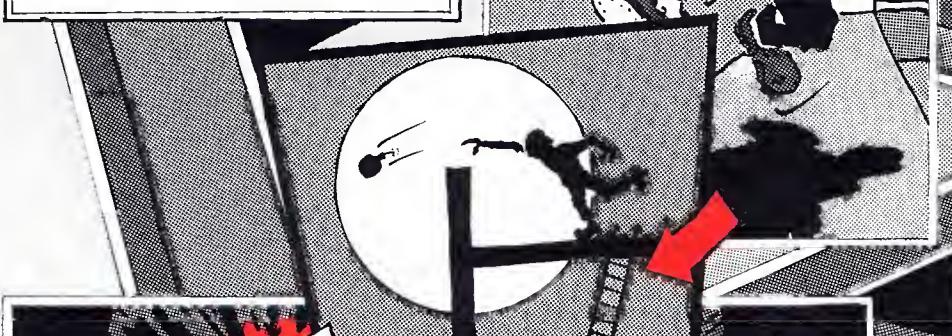

Variables Used

PF	person's foot
PH	person's head
PC	person's character
LP	girder's positions
SC	score
HI	high score

Conversion

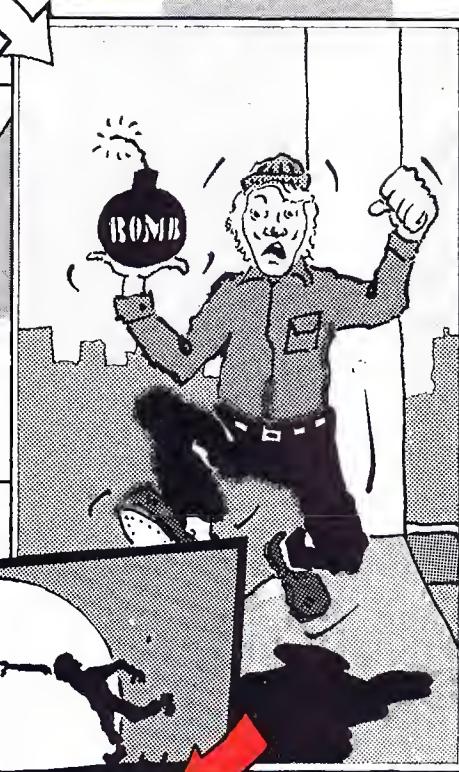

The game uses mostly pokes and peeks and so it will be almost impossible to convert to another machine.

IMPORTANT NEWS

FOR ALL GAMES COMPUTING READERS!!!

We regret to announce that this is the last issue of Games Computing that you will see, BUT...

DO NOT DESPAIR!

We are thrilled to announce the launch of our FANTASTIC BRAND NEW MAGAZINE:

1984 saw such vast changes in the computer games industry that we felt a radical re-think was necessary, so that we could cater properly to the needs and interests of our readers. COMPUTER GAMER is not so much a new magazine but more a new concept for computer gamers everywhere. Priced at 95p the first glorious issue will be on sale in March 1985 and is an absolute must for all games enthusiasts. Along with current news and features of topical interest, each issue will contain great programs to type in for the popular home computers, a regular Adventure column offering hints and tips, reviews of the latest software, a 'high score' page, articles on how to write your own programs and develop amazing effects, and much, much more.

A special feature of the new magazine will be a readers' club which will offer a regular news letter, special offers and all sorts of goodies that the games player just cannot afford to miss!

So next month look out for the very first issue of...

COMPUTER GAMER.

COMMODORE 64

COLOUR

The object of the game is to work out the secret code or colours hidden behind the grid. The colours are entered into the computer by using the numbers keys (1-8). After all 4 colours have been entered then the RETURN key has to be pressed. If at any time a mistake is made when entering the colours (i.e. type in wrong colour) then the DELETE key can be used to erase the unwanted colour. If after 12 attempts you have not yet discovered the code then the game will end. After the input has been entered the computer will respond by printing a number of black or white 'T's. A black 'T' represents a colour which is correct and is also correctly located. A white 'T' represents a correct colour but incorrectly located.

RUNdown

Lines	Action
50-270	Set up board
290-360	Select Colours
370-410	Plot guess onto screen
420-480	Input guess
490-530	Check guess
630-670	Delete guess
680-730	Plot guess
740-850	Check guess
860-970	Plot results
1000-1100	Uncover code
1230-1440	Title page

Variables Used

VC	Start of colour memory map
VP	Start of screen memory map
CG	Guess number
GN	Number of attempts
WM	White markers
BM	Black markers

MAIL ORDER PROTECTION SCHEME

If you order goods from Mail Order Advertisers in this magazine and pay by post in advance of delivery, this publication will consider you for compensation if the advertiser should become insolvent or bankrupt, provided:

1. You have not received the goods or had your money returned; and
2. You write to the publisher of this publication explaining the position not earlier than 28 days from the day you sent your order and not later than 2 months from that day.

Please do not wait until the last moment to inform us. When you write, we will tell you how to make your claim and what evidence of payment is required.

We guarantee to meet claims from readers made in accordance with the above procedure as soon as possible after the advertiser has been declared bankrupt or insolvent to a limit of £1,800 per annum for any one advertiser, so affected, and up to £5,400 p.a. in respect of all insolvent advertisers. Claims may be paid for higher amounts, or when the above procedures have not been complied with, at the discretion of this publication, but we do not guarantee to do so in view of the need to set some limit to this commitment and to learn quickly of reader's difficulties.

This guarantee covers only advance payment sent in direct response to an advertisement in this magazine (not, for example, payments made in response to catalogues, etc, received as a result of answering such advertisements):

CLASSIFIED ADVERTISEMENTS ARE EXCLUDED.

STARCade

UP UP AND AWAY...

© 1985

How do you fancy getting away from it all
with a trip in our hot air balloon?

Sounds tempting doesn't it. But it takes skill
and fast reactions to avoid all the hazards.

Are you up to it?

Could you manoeuvre the balloon over the tree tops and mountain peaks, while still keeping an eye on your ballast and your fuel, because when it starts to run low you'll have to descend, and not being distracted by people throwing stones at you, land carefully on the fuel pods. You'll be lucky to rise back up again. But look out!!

Watch that kite doesn't become entangled with you and don't worry about the noise, it's only the aeroplanes that come diving and swooping at you. You'll need to rise higher to avoid the turbulence from the windmill blades but as you do you're likely to run into storm clouds and bolts of lightning. Also, the higher you climb in the stratosphere the more difficult the balloon becomes to handle.

By now you'll start to panic!! and wonder how on earth you're going to make it, but then again that's all the fun of the air.
